Current Index to Journals in Education ,2002 **Nuclear Science Abstracts** ,1976 **Research in Education** ,1971 Energy Research Abstracts ,1986 *Evolution and Emergence* William R. Stoeger,2007-04-05 A collection of essays by experts in the field exploring how nature works at every level to produce more complex and highly organized objects systems and organisms from much simpler components and how our increasing understanding of this universal phenomenon of emergence can lead us to a deeper and richer appreciation of who we are as human beings and of our relationship to God Several chapters introduce the key philosophical ideas about reductionism and emergence while others explore the fascinating world of emergent phenomena in physics biology and the neurosciences Finally there are contributions probing the meaning and significance of these findings for our general description of the world and ourselves in relation to God from philosophy and theology The collection as a whole will extend the mutual creative interaction among the sciences philosophy and theology *The Concept of Probability* E.I. Bitsakis,C.A. Nicolaides,2012-12-06 This volume contains articles from invited speakers at a meeting which took place in Delphi during the week of October 12 16 1987 The theme of the meeting was The concept of probability and was organized by the Group of Interdisciplinary Research Physics Department University of Athens and the Theoretical and Physical Chemistry Institute of the National Hellenic Research Foundation Athens The Group of Interdisciplinary Research organized two previous Meetings 1 on the Concept of physical reality 1982 and 2 on the question of determinism in Physics 1984 This small gathering which was attended by scientists mathematicians and philosophers from more than 22 countries took place on the occasion of the 100th year from the birthday of E Schrodinger As the father of wave mechanics Schrodinger thrusted us into an era of physics where knowledge of the IV function is considered for most situations as the ultimate aim and the ultimate truth Yet he as well as another towering figure of 20th century physics A Einstein never really felt comfortable with the interpretation of the meaning of IV and of the information that it contains With Einstein playing the leading role a debate about concepts and interpretation started as soon as quantum mechanics was born Central theme to this debate is the concept of probability a concept which permeates explicitly or implicitly all science and even our decision making in everyday life The articles cover a broad spectrum of thought and results mathematical physical epistemological experimental specific general many of them outside the accepted norm **Neuroscience** Alwyn Scott,2007-12-14 Arguably the most intricate dynamic object in the universe the human brain is an unsounded source of wonder for the scientific community The primary aim of this book is to provide both students and established investigators in the growing area of neuroscience with an appreciation of the roles that mathematics may play in helping to understand this enigmatic organ Along with discussions of results obtained by the neuroscience community emphasis is placed on suggesting fruitful research problems for those planning to embark on mathematical studies in neuroscience To make the overall perspectives understandable to philosophers and psychologists essential features of the discussions are

presented in ordinary English with more detailed mathematical comments in appendices and footnotes Although it attempts to maintain both clarity and biological relevance this is not a text on the anatomy of nerve systems thus readers should bring some knowledge of neurophysiology through other courses associated studies or laboratory research It is a guiding theme throughout the book that the brain is organized into several quite different levels of dynamic activity As will be seen these levels are hierarchically structured beginning with the molecular dynamics

of intrinsic membrane proteins and proceeding upward through the switching properties of active membrane patches and synapses the emergence of impulses on active fibers overall properties of individual neurons and the growth of functional assemblies of interacting neurons to the global dynamics of a brain At each level of description reality turns different facets of her mystery to us and diverse phenomena make their contributions to the brain's collective behavior **Literature 1987, Part 1 S.**

Asymptotic Combinatorics with Applications to Mathematical Physics European Mathematical Summer School (2001 : St. Petersburg),2003 At the Summer School Saint Petersburg 2001 the main lecture courses bore on recent progress in asymptotic representation theory those written up for this volume deal with the theory of representations of infinite symmetric groups and groups of infinite matrices over finite fields Riemann Hilbert problem techniques applied to the study of spectra of random matrices and asymptotics of Young diagrams with Plancherel measure the corresponding central limit theorems the combinatorics of modular curves and random trees with application to QFT free probability and random matrices and Hecke algebras Federal Register ,1976 **Resources in Education** ,1973-05 **Methodological Issues in Consciousness Research, volume II** Axel Cleeremans,2025-04-16 This Research Topic is the second volume of the Research Topic Methodological Issues in Consciousness Research Please see the first volume here The simplest and perhaps the first notion of consciousness in the West as a sentience or awareness of internal or external existence was introduced in the Seventeenth century by the English physician Robert Fludd though similar and even more refined notions of

consciousness were developed centuries before in Indian philosophy and contemplative wisdom traditions Because it permeates human existence in so many different ways the study of consciousness is a profoundly interdisciplinary endeavour and engages disciplines such as philosophy including Eastern philosophy cognitive neuroscience anthropology psychiatry and psychopathology and even physics The study of consciousness may involve domains as diverse as perceptual awareness cognition and metacognition reasoning executive control theory of mind self sleep and dreaming emotional competence and empathy It concerns both healthy e g aging meditation spiritual experiences and pathological conditions e g epilepsy neglect and locked in syndromes minimally conscious states anesthesia and involves considerations operating at different time scales e g evolution development expertise Today however and despite almost thirty years of concerted interdisciplinary efforts the nature and mechanisms of consciousness remain as elusive as ever Theoretically different conceptual frameworks aimed at characterizing both its functional and phenomenal aspects take sometimes radically different assumptions as their starting point but often fail to make sufficiently precise differential predictions to be falsifiable While most recent views generally consider methods investigating human higher order reflective or access consciousness the theoretical and experimental foundations of primary proto consciousness often remain vague and ignore evolutionary considerations Influential distinctions such as the distinction between phenomenal and access consciousness between pre reflective minimal and the reflective narrative self between graded and all or none processing or even between conscious and unconscious processing all remain unsettled or controversial The field is also rife with methodological challenges and controversies some of which remain largely unsolved Questions such as how to best measure awareness or to how establish its absence issues such as what kind of neuroscientific data would convincingly make it possible to isolate the neural correlates of consciousness or what types of confounds contaminate extant findings challenges such as how to imagine crucial experiments that are sufficiently sensitive to falsify some theoretical proposals all need to be addressed in open interdisciplinary dialogue This Frontiers Research Topic is aimed at stimulating discussion about current methodological issues and trends in consciousness research We welcome theoretical and empirical contributions as well as empirical articles from both experts and young scientists who work in the field of consciousness research Submissions of related hypotheses original research articles case reports perspectives reviews opinions and commentaries are welcome We very much hope that this Frontiers Research Topic will contribute to enhancing our characterization and understanding of the methodological and conceptual challenges associated with the study of human consciousness
