eWork and eBusiness in Architecture Engineering and Construction 2018 collects the papers presented at the 12th European Conference on Product and Process Modelling ECPPM 2018 Copenhagen 12-14 September 2018. The contributions cover complementary thematic areas that hold great promise towards the advancement of research and technological development in the modelling of complex engineering systems encompassing a substantial number of high quality contributions on a large spectrum of topics pertaining to ICT deployment instances in AEC FM including Information and Knowledge Management Construction Management Description Logics and Ontology Application in AEC Risk Management 5D nD Modelling Simulation and Augmented Reality Infrastructure Condition Assessment Standardization of Data Structures Regulatory and Legal Aspects Multi Model and distributed Data Management System Identification Industrialized Production Smart Products and Services Interoperability Smart Cities Sustainable Buildings and Urban Environments Collaboration and Teamwork BIM Implementation and Deployment Building Performance Simulation Intelligent Catalogues and Services eWork and eBusiness in Architecture Engineering and Construction 2018 represents a rich and comprehensive resource for academics and researchers working in the interdisciplinary areas of information technology applications in architecture engineering and construction. In the last two decades the biennial ECPPM European Conference on Product and Process Modelling conference series as the oldest BIM conference has provided a unique platform for the presentation and discussion of the most recent advances with regard to the ICT Information and Communication Technology applications in the AEC FM Architecture Engineering Construction and Facilities Management domains. *Advances in Informatics and Computing in Civil and Construction Engineering* Ivan Mutis, Timo Hartmann, 2018-10-08 This proceedings volume chronicles the papers presented at the 35th CIB W78 2018 Conference IT in Design Construction and Management held in Chicago IL USA in October 2018. The theme of the conference focused on fostering encouraging and promoting research and development in the application of integrated information technology IT throughout the life cycle of the design construction and occupancy of buildings and related facilities. The CIB International Council for Research and Innovation in Building Construction was established in 1953 as an association whose objectives were to stimulate and facilitate international cooperation and information exchange between governmental research institutes in the building and construction sector with an emphasis on those institutes engaged in technical fields of research. The conference brought together more than 200 scholars from 40 countries who presented the innovative concepts and methods featured in this collection of papers. *Metrics of Sensory Motor Coordination and Integration in Robots and Animals* Fabio Bonsignorio, Elena Messina, Angel P. del Pobil, John Hallam, 2019-03-23 This book focuses on a critical issue in the study of physical agents whether natural or artificial: the quantitative modelling of sensory motor coordination. Adopting a novel approach it defines a common scientific framework for

both the intelligent systems designed by engineers and those that have evolved naturally. As such it contributes to the widespread adoption of a rigorous quantitative and refutable approach in the scientific study of embodied intelligence and cognition. More than 70 years after Norbert Wiener's famous book *Cybernetics or Control and Communication in the Animal and the Machine* (1948), robotics, AI and life sciences seem to be converging towards a common model of what we can call the science of embodied intelligent cognitive agents. This book is interesting for an interdisciplinary community of researchers, technologists and entrepreneurs working at the frontiers of robotics and AI, neuroscience and general life and brain sciences.

Robotic Technologies in Biomedical and Healthcare Engineering Deepak Gupta, Moolchand Sharma, Vikas

Chaudhary, Ashish Khanna, 2021-06-29. New prospects for biomedical and healthcare engineering are being created by the rapid development of robotic and artificial intelligence techniques. Innovative technologies such as artificial intelligence, deep learning, robotics and IoT are currently under huge influence in today's modern world. For instance, a micro/nano robot allows us to study the fundamental problems at a cellular scale owing to its precise positioning and manipulation ability. The medical robot paves a new way for the low-invasive and high-efficient clinical operation and rehabilitation. Robotics is able to improve the rehabilitative efficacy of patients. This book aims at exhibiting the latest research achievements, findings and ideas in the field of robotics in biomedical and healthcare engineering, primarily focusing on the walking assistive robot, tele robotic surgery, upper/lower limb rehabilitation and radiosurgery. As a result, a wide range of robots are being developed to serve a variety of roles within the medical environment. Robots specializing in human treatment include surgical robots and rehabilitation robots. The field of assistive and therapeutic robotic devices is also expanding rapidly. These include robots that help patients rehabilitate from severe conditions like strokes, empathic robots that assist in the care of older or physically/mentally challenged individuals and industrial robots that take on a variety of routine tasks such as sterilizing rooms and delivering medical supplies and equipment including medications. The objectives of the book are in terms of advancing the state of the art of robotic techniques and addressing the challenging problems in biomedical and healthcare engineering.
