Impact of Survivin Acetylation on its Biological Function David Dannheisig, 2017-06-06 In his research David Dannheisig investigates the influence of lysine129 acetylation on the biological function of survivin including alteration of nucleocytoplasmic shuttling as well as dimerization behavior Since survivin participates in two major hallmarks of oncogenesis namely cell death inhibition and chromosomal segregation during the cell cycle it reflects a valuable target in cancer therapy and research The author establishes proximity dependent fluorescence microscopic methods to quantify the interaction of survivin with the export receptor Crm1 as well as the homodimerization itself In the future those systems can be used to examine the feasible effect of chemical modulators which are targeting these interactions in a cellular background The outcome achieved is an essential step towards the enhancement of potential cancer therapies **The Oxford**
