The Development of Propulsion Technology for U.S. Space-Launch Vehicles, 1926-1991 J. D. Hunley,2013-03-15 In this definitive study J D Hunley traces the program s development from Goddard s early rockets and the German V 2 missile through the Titan IVA and the Space Shuttle with a focus on space launch vehicles Since these rockets often evolved from early missiles he pays considerable attention to missile technology not as an end in itself but as a contributor to launch vehicle technology Focusing especially on the engineering culture of the program Hunley communicates this very human side of technological

development by means of anecdotes character sketches and case studies of problems faced by rocket engineers He shows how such a highly adaptive approach enabled the evolution of a hugely complicated technology that was impressive but decidedly not rocket science Unique in its single volume coverage of the evolution of launch vehicle technology from 1926 to 1991 this meticulously researched work will inform scholars and engineers interested in the history of technology and innovation as well as those specializing in the history of space flight
