

The figure below shows the three types of survivorship curves.

Label	Type I, II, or III?	Description of strategy	Example organisms that use this strategy
A	Type I	Organisms have very low offspring and take very good care of them to ensure their survival. High survival at young, because it's really easy to take care of as they age.	Large mammals like humans, elephants, horses, whales, whales.
B	Type II	Organisms equally likely to die at any point throughout their life.	Small animals like Robins, Parrots, birds, lizards.
C	Type III	Organisms have many offspring but do not take care of them as they age.	Fish, some insects, some plants.

What is meant by **population distribution**?

To summarize, the three main population distribution patterns could be shown in the table below:

Type of distribution	Picture of distribution	Why use this pattern?
Clumped		VERY COMMON Safety in numbers, social interactions, mating and caring for young, resources are clumped.
Dispersed		Spatial avoidance, territoriality.
Random		VERY COMMON It's random-like. Food is shared by birds, but birds don't get together, so random (scattered).
