### **Coastal Geohazard and Offshore Geotechnics**

Dong-Sheng Jeng, Jisheng Zhang, V.S. Ozgur Kirca, 2021-05-18 With rapid developments being made in the exploration of marine resources coastal geohazard and offshore geotechnics have attracted a great deal of attention from coastal geotechnical engineers with significant progress being made in recent years Due to the complicated nature of marine environments there are numerous natural marine geohazard present throughout the world's marine areas e.g. the South China Sea In addition damage to offshore infrastructure e.g. monopiles bridge piers etc and their supporting installations pipelines power transmission cables etc has occurred in the last decades A better understanding of the fundamental mechanisms and soil behavior of the seabed in marine environments will help engineers in the design and planning processes of coastal geotechnical engineering projects The purpose of this book is to present the recent advances made in the field of coastal geohazards and offshore geotechnics The book will provide researchers with information regarding the recent developments in the field and possible future developments The book is composed of eighteen papers covering three main themes 1 the mechanisms of fluid seabed interactions and the instability associated with seabeds when they are under dynamic loading papers 1-5 2 evaluation of the stability of marine infrastructure including pipelines papers 6-8 piled foundation and bridge piers papers 9-12 submarine tunnels paper 13 and other supported foundations paper 14 and 3 coastal geohazards including submarine landslides and slope stability papers 15-16 and other geohazard issues papers 17-18 The editors hope that this book will function as a guide for researchers scientists and scholars as well as practitioners of coastal and offshore engineering

*Theory and Application of Hydraulic Modeling* Taro Arikawa, 2024-04-17 This edited volume from Japan's Research Subcommittee on Methodology for Dealing with Geomaterials in Hydraulic Model Experiments presents readers with a state of the art overview of experimental and computational methods used to address similarity scaling incompatibilities present in fluid sediment flows Readers will gain an understanding of complex phenomena in the boundary fields of hydraulics and geotechnical engineering Chapter contributors focus on the phenomena that are affected by the interactions between fluid wave and ground in a complex field which for many years have been challenging to process and model In addition to describing the implementation of model tests and the concept of the law of similarity this book contrasts these phenomena with the laws of similarity describes models and numerical analysis methods and explains important

considerations using experimental case studies Each chapter is written by leading researchers in Japan who are members of the Research Subcommittee on Methodology for Dealing with Geomaterials in Hydraulic Model Experiments The chapters are closely linked but are written so that each can be read individually Readers will be able to apply this knowledge to their work and to create models that more accurately simulate the interactions between wave and ground allowing them to better understand these phenomena and devise more appropriate strategies for defense and so on when necessary This collection provides information that can be used by young researchers and post graduate students in the boundary fields of hydraulics and geotechnical engineering who aim at becoming civil engineers and it will be of particular value to practicing engineers of all experience levels who must regularly analyze complex interactions between fluids and ground
