The Oxford Handbook of Credit Derivatives Alexander Lipton, Andrew Rennie, 2013-01-17 From the late 1990s the spectacular growth of a secondary market for credit through derivatives has been matched by the emergence of mathematical modelling analysing the credit risk embedded in these contracts This book aims to provide a broad and deep overview of this modelling covering statistical analysis and techniques modelling of default of both single and multiple entities counterparty risk Gaussian and non Gaussian modelling and securitisation Both reduced form and firm value models for the default of single entities are considered in detail with extensive discussion of both their theoretical underpinnings and practical usage in pricing and risk For multiple entity modelling the now notorious Gaussian copula is discussed with analysis of its shortcomings as well as a wide range of alternative approaches including multivariate extensions to both firm value and reduced form models and continuous time Markov chains One important case of multiple entities modelling counterparty risk in credit derivatives is further explored in two dedicated chapters Alternative non Gaussian approaches to modelling are also discussed including extreme value theory and saddle point approximations to deal

with tail risk Finally the recent growth in securitisation is covered including house price modelling and pricing models for asset backed CDOs The current credit crisis has brought modelling of the previously arcane credit markets into the public arena Lipton and Rennie with their excellent team of contributors provide a timely discussion of the mathematical modelling that underpins both credit derivatives and securitisation Though technical in nature the pros and cons of various approaches attempt to provide a balanced view of the role that mathematical modelling plays in the modern credit markets This book will appeal to students and researchers in statistics economics and finance as well as practitioners credit traders and quantitative analysts
