

Safety Manual

The following precautions need to be taken when using any hand tools in the RPI Centrifuge Lab in order to promote a safe work environment and keep accidents as small and as infrequent as possible. In general, only use a tool for what it was originally designed to do. Also, be careful to inspect the tool before using it, as older and worn out tools become much more dangerous than a tool in good condition. It is also important to wear the proper safety protective equipment such as gloves or safety glasses whenever using any hand tools. Always remember to keep yourself and the other people working around you in mind when working with tools in the lab. It is important to be aware of your surroundings; not being aware of the position of coworkers is no excuse for an accident occurring in the lab.

Screwdriver:

- Never use a screwdriver as a chisel, as it might shatter and become a hazard.
- Always make sure the handle and shaft do not have any cracks and are in good condition before using a screwdriver.
- Never use a screwdriver as some sort of pry bar.
- Always take the time to find the right sized and right type screwdriver for the job, as this will make your work go by much quicker and also ensure the job gets done the safest way possible.

Hammer:

- Never use a hammer which has a loose or cracked handle, as the head may fly off and become a hazard.
- Ensure that the hammer is both the proper type and size for the job you are performing, as this will make your work go by much quicker and also ensure the job gets done the safest way possible.
- Never use a hammer with a chipped, cracked, or broken claw.
- When using a hammer, keep your motions short and compact, and try to avoid longer swings of the hammer. This will not only cause you to be more accurate with what you strike with the hammer, this will decrease the chance of you hitting something or somebody by accident at the top of the hammer stroke.

Saw:

- Ensure that the saw's teeth are sufficiently sharp, as a dull tool is much more dangerous than a sharp tool.
- Always be careful to cut in a direction that puts yourself and others out of harm whenever possible.
- Always use a vise or other means to secure your work, as this will make it both easier and safer to make a cut with a saw.

Implementing Quality in Laboratory Policies and Processes

Donnell R. Christian Jr., Stephanie Drilling, 2009-11-24. In order to gain accreditation every laboratory must have a superior quality assurance program. The keys to a successful program are the operational and technical manuals and associated documents which define the program and its various components. Written by experts with global experience in setting up laboratories. **Implementing Quality in Laboratory Policies and Processes Using Templates**. Project Management and Six Sigma provides templates for the various policies, procedures and forms that should be contained in the quality assurance operational and technical manuals of a laboratory seeking accreditation. Templates for the entire project life cycle. The book begins with a general introduction and overview of quality assurance and then moves on to cover implementation strategies. It contains best practices and templates for the project management of the design and implementation of the laboratory operational and technical manuals required to establish a quality assurance program. The templates span the entire project life cycle from initiation to planning to execution to monitoring and finally to closure. The book also examines how Six Sigma concepts can be used to optimize laboratories and contains templates that cover administrative issues, quality assurance, sample control and health and safety issues. In addition, there is a section of criteria files that relate the individual document templates to specific accreditation criteria. Addresses the standards of ISO 17025. The results of any laboratory examination have the potential to be presented in court and can ultimately affect the life and liberty of the parties involved. Therefore a stringent quality assurance program including well documented policies and a procedure manual is essential. Ensuring that laboratories meet the standards of ISO 17025, this volume is a critical component of any laboratory's accreditation process.
