biomedical applications of LTP has generated new scientific knowledge regarding the interaction of plasma with soft matter including cells tissues seeds and plants The observed effects of LTP on biological cells are mediated by the plasma produced reactive oxygen species ROS and reactive nitrogen species RNS These include hydroxyl OH atomic oxygen O singlet delta oxygen O<sub>2</sub> 1 superoxide O<sub>2</sub> hydrogen peroxide H<sub>2</sub>O<sub>2</sub> and nitric oxide NO Some of these species are known to play important roles in biology serving as signaling molecules in living organisms When they come in contact with biological cells these species interact with the lipids and proteins of the cell membrane enter the cell and increase the intracellular ROS concentrations which can lead to DNA damage and may compromise the integrity of other cell organelles ROS and RNS can also trigger cell signaling pathways which can lead to cellular death by apoptosis or necrosis Other plasma generated agents that could play biological roles are charged particles electrons and ions UV photons and electric fields
