Fluid Mechanics of Environmental Interfaces, Second Edition Carlo Gualtieri,Dragutin T. Mihailovic,2012-11-21 Environmental Fluid Mechanics EFM studies the motion of air and water at several different scales the fate and transport of species carried along by these fluids and the interactions among those flows and geological biological and engineered systems EFM emerged some decades ago as a response to the need for tools to study problems of flow and transport in rivers estuaries lakes groundwater and the atmosphere it is a topic of increasing importance for decision makers engineers and researchers alike The second edition of the successful textbook Fluid Mechanics of Environmental Interfaces is still aimed at providing a comprehensive overview of fluid mechanical processes occurring at the different interfaces existing in the realm of EFM such as the air water interface the air land interface the water sediment interface the surface water groundwater interface the water vegetation interface and the water biological systems interface Across any of these interfaces mass momentum and heat are exchanged through different fluid mechanical processes over various spatial and temporal scales In this second edition the unique feature of this book considering all the topics from the point of view of the concept of environmental interface was maintained while the chapters were updated and five new chapters have been added to significantly enlarge the coverage of the subject area The book starts with a chapter introducing the concept of EFM and its scope scales processes and systems Then the book is structured in three parts with fifteen chapters Part one which is composed of four chapters covers the processes occurring at the interfaces between the atmosphere and the surface of the land and the seas including the transport of dust and the dispersion of passive substances within the atmosphere Part two deals in five chapters with the fluid mechanics at the air water interface at small scales and sediment water interface including the advective diffusion of air

bubbles the hyporheic exchange and the tidal bores Finally part three discusses in six chapters the processes at the interfaces between fluids and biotic systems such as transport processes in the soil vegetation lower atmosphere system turbulence and wind above and within the forest canopy flow and mass transport in vegetated open channels transport processes to and from benthic plants and animals and coupling between interacting environmental interfaces Each chapter has an educational part which is structured in four sections a synopsis of the chapter a list of keywords that the reader should have encountered in the chapter a list of questions and a list of unsolved problems related to the topics covered by the chapter The book will be of interest to graduate students and researchers in environmental sciences civil engineering and environmental engineering geo physics atmospheric science meteorology limnology oceanography and applied mathematics

Science, Music, And Mathematics: The Deepest Connections (Second Edition) Michael Edgeworth McIntyre, 2023-08-02 Professor Michael Edgeworth McIntyre is an eminent scientist who has also had a part time career as a musician In this book he offers an extraordinary synthesis revealing the many deep connections between science music and mathematics He avoids equations and technical jargon The connections are deep in the sense of being embedded in our very nature rooted in biological evolution over hundreds of millions of years Michael guides us through biological evolution perception psychology and even unconscious science and mathematics all the way to the scientific uncertainties about the climate crisis He also has a message of hope for the future Contrary to popular belief he holds that biological evolution has given us not only the nastiest but also the most compassionate and cooperative parts of human nature This insight comes from recognizing that biological evolution is far more than a simple competition between selfish genes Instead he argues in some ways it is more like the turbulent eddying flow in a river or in an atmospheric jet stream a complex process spanning a vast range of timescales Professor McIntyre is a Fellow of the Royal Society of London FRS and has long been interested in how different branches of science can better communicate with each other and with the public His work harnesses aspects of neuroscience and psychology that point toward the deep lucidity principles that underlie skilful communication principles related to the way music works music of any genre This Second Edition sharpens the previous discussion of communication skills and their importance for today's great problems ranging from the widely discussed climate crisis to the need to understand the strengths and weaknesses of artificial intelligence

Global Climate Xavier Rodo, Francisco Comin, 2013-03-09 Uncertainty for Everyone The one thing that is certain about the world is that the world is uncertain I have here the question that apart of the matter living matter has to resolve in each and every one of its moments of existence The environment of a living being is apart of the living being where it turns out the rest of the living beings live This is the drama of life on earth Every living individual debates with his environment exchanging matter energy and information in the hope of staying alive the same as all living beings who share that same environment The adventure of a living being of all living beings is to maintain reasonable independence in face of the fluctuations of uncertainty within the environment The range of restrictions and mutual relationships is colossal How is the transcendental pretension of staying alive regulated There is an equation imposed by the laws of thermodynamics and the mathematical theory of information about the interaction of a living being with his environment which we could state like this The complexity of a living individual plus his capacity for anticipation in respect to his environment is identical to the uncertainty of the environment plus the capacity of that living being to change the environment
