Polymerase Chain Reaction

Synopsis

In this Polymerase Chain Reaction (PCR) simulation, you will see through eight steps another method known as restriction fragment length polymorphism (RFLP) analysis. This involves the subject of electrophoresis in the sense that the fragments that are formed are separated by size.

Design and

After sampling, you will go to the electrophoresis apparatus. The samples of DNA you collected by using a microchip is electrophoresed, and this electrophoresis from the source causes it to separate by size. The current separates chromosomes by their separation.

How the structure of DNA results separation of sizes

In the simulation, you learn that DNA separation on the molecular level, illustrating the structure of DNA and the separation that results will be used throughout the experimental process, as well as all applications of this technique.

Identify the samples

In the first simulation, you will collect your samples and other needed samples from the laboratory. You will also learn techniques for identifying the samples.

Learning Objectives

In this part of the simulation, you will see reports:

1. Results for separation of DNA fragments, protein separation and synthesis.
2. Reports on DNA separation using this method as well as other methods in the laboratory.
