### INTRODUCTION

In the [Population Dynamics](#) Click & Learn, you'll explore a powerful tool for learning about populations: mathematical models. As you'll see by doing the Click & Learn and this activity, you can use models to answer questions, solve problems, and make predictions about all kinds of populations — from bacteria in your body, to wildlife across the world, to our own human populations.

### PART 1: Introduction to Population Dynamics

Open the [Population Dynamics](#) Click & Learn and read through the introduction on the first page.

1. Describe a specific question or problem related to population dynamics that interests you.

I would be curious about the growth and sustainability of the human population in the long term.

2. Do you think the question or problem you described could be investigated using a mathematical population model? Why or why not?

We could likely use the demographic transition model as it measures birth and death rates along with carrying capacity.

### PART 2: Exploring the Exponential Growth Model

Open the "Exponential growth model" tab and read the "Introduction" section.

3. The end of the "Introduction" describes how you could use a continuous-time, exponential growth model to simulate an *E. coli* population growing in a lab. Describe another specific population and situation that you could simulate with this type of model.

Other bacteria, populations in recovery from a disaster, or populations in ideal conditions for reproduction.

4. Complete the following table to explain the *biological* meanings of the symbols in the exponential growth model. For each explanation, give a specific example using the population you described above.

Symbol	Biological Meaning	Specific Example
$N$	The number in the population	how many bacteria are in the population
$t$	Time we are using as a measure	1 day
$dN/dt$	The change in population size over the change in reproduction time	In one day, there was an increase from $x$ bacteria to $y$ bacteria
$r$	Rate of reproduction	1.1 bacteria per minute.
$N_0$	Initial population	There were initially $z$ bacteria

5. Both  $dN/dt$  and  $r$  are types of growth rates. What are the differences between them?

While the first represents population growth rates as a whole,  $r$  is based more in birth/death rates per

Dronamraju, 2004-04-05 This book originally published in 2004 is concerned with the links between human evolution and infectious disease It has long been recognised that an important factor in human evolution has been the struggle against infectious disease and more recently it was revealed that complex genetic polymorphisms are the direct result of that struggle As molecular biological techniques become more sophisticated a number of breakthroughs in the area of host pathogen evolution led to an increased interest in this field From the historical beginnings of J B S Haldane's original hypothesis to more recent research this book strives to evaluate infectious diseases from an evolutionary perspective It provides a survey of information regarding host pathogen evolution related to major infectious diseases and parasitic infections including malaria influenza and leishmaniasis Written by leading authorities in the field and edited by a former pupil of Haldane Infectious Disease and Host Pathogen Evolution will be valuable for those working in related areas of microbiology parasitology immunology and infectious disease

Subcommittee on the Dept. of the Interior and Related Agencies, 1987      *Urban Deer Havens* Clark E. Adams, Cassandra LaFleur Villarreal, 2020-05-06 Urban Deer Havens consists of a thorough examination of selected cervid deer species that are known to inhabit urban communities in the United States The deer species that are included in this presentation consisted of white tailed *Odocoileus virginianus* Key deer *O. v. clavium* moose *Alces alces* elk *Cervus elaphus* mule *Odocoileus hemionus* and black tailed deer *O. h. columbianus* This book is the first attempt to examine the similarities and differences in those factors that allow the selected cervids to exist and thrive in urban habitats This information has never been collected collated reviewed and published under one cover document Yet all five are known to inhabit urban communities within their geographic range The lack of information concerning several important examples of urban cervids

in conjunction with a proliferation of information on white tailed deer only is an incomplete and biased presentation This book is the first comprehensive source of information on urban deer management which includes a broad assemblage of urban cervids The overall objective of this book is to provide a more holistic examination of urban cervids For example it examines the similarities and differences of the environmental impacts management strategies and human dimensions considerations concerning urban cervids in general and using specific examples Urban Deer Havens features four chapters that include Urban deer census techniques and population dynamics Comprehensive tables that review urban community deer management plans National and state wide estimates the five selected cervids Laws and regulations concerning urban deer Lethal and nonlethal management options for managing deer Steps for managing urban deer populations Examples of urban deer management efforts
