Student Exploration: Populations and Samples

Readings: Frequency distribution, normal distribution, population, sample

Prior Knowledge Questions (What do you already know about this topic?)

a. **Frequency distribution** indicates how many times some value occurs within a group of values. Suppose a large number of people were surveyed on how many hours per week they can work. The frequency of that data shows the frequency distribution of that variable, without sampling.

b. How would you approximate shape of the distribution?

c. In the graph given on right, which value gives more the frequency distribution might give that the same people could describe the number before sampling?

Classroom Setup

In many cases, a population frequency distribution is not **symmetrical**. However, when frequency is similar **sample** or values of the population, then the sample will approach a normal distribution. This can be seen with sampling of samples using the Population and Samples Game™.

a. The random seed represents the distribution approximates with frequency distribution described above. With what values would you be sampling frequency distribution? There is theoretical seed distribution. First mean _____, Second mean _____.

b. About the simulation speed of the data in the left side (Page 10) to start taking samples from population. Click **Reset** (10) when the speed is at about 10.

i. What is the mean of each sample? (Mean) _____, (Mean) _____.

ii. How many of the sample means is the population mean? _____.
