Mathematics for Social Justice Gizem Karaali, Lily S. Khadjavi, 2021-11-15. *Mathematics for Social Justice: Focusing on Quantitative Reasoning and Statistics* offers a collection of resources for mathematics faculty interested in incorporating questions of social justice into their classrooms. The book comprises seventeen classroom-tested modules featuring ready-to-use activities and investigations for college mathematics and statistics courses. The modules empower students to study issues of social justice and to see the power and limitations of mathematics in real-world contexts of deep concern. The primary focus is on classroom activities where students can ask their own questions, find and analyze real data, apply mathematical ideas themselves, and draw their own conclusions. Module topics in the book focus on technical content that could support courses in quantitative reasoning or introductory statistics. Social themes include electoral issues, environmental justice, equity, inequity, human rights, and racial justice, including topics such as gentrification, partisan gerrymandering, policing, and more. The volume editors are leaders of the national movement to include social justice material in mathematics teaching and jointly edited the earlier AMS/MAA volume *Mathematics for Social Justice: Resources for the College Classroom*. Gizem Karaali is Professor of Mathematics at Pomona College. She is a past chair of the Special Interest Group of the MAA on Quantitative Literacy (SIGMAA QL). She is one of the founding editors of *The Journal of Humanistic Mathematics*, senior editor of *Numeracy*, and an associate editor for *The Mathematical Intelligencer*; she also serves on the editorial board of the MAA's Classroom Resource Materials series. Lily Khadjavi is Professor and Chair of Mathematics at Loyola Marymount University and is a past co-chair of the Infinite Possibilities Conference. In 2020, she was appointed by the California State Attorney General to the Racial and Identity Profiling Act Board, which works with the California Department of Justice. She currently serves on the editorial board of the MAA's Spectrum series and the Human Resources Advisory Committee for the Mathematical Sciences Research Institute in Berkeley.

Factorial Survey Experiments Katrin Auspurg, Thomas Hinz, 2014-11-28 Filling a gap in the literature of the field Factorial Survey Experiments provides researchers with a practical guide to using the factorial survey method to assess respondents' beliefs about the world judgment principles or decision rules through multi-dimensional stimuli vignettes that resemble real-life decision-making situations. Using insightful examples to illustrate their arguments, authors Katrin Auspurg and Thomas Hinz guide researchers through all relevant steps including how to set up the factorial experimental design, drawing samples of vignettes and respondents, how to handle the practical challenges that must be mastered when an experimental plan with many different treatments is embedded in a survey format, and how to deal with questions of data analysis. In addition to providing the how-tos of designing factorial survey experiments, the authors cover recent developments of similar methods such as conjoint analyses, choice experiments, and more advanced statistical tools.

Quantitative Methodologies using Multi-Methods Sergey Samoilenko, Kweku-Muata Osei-Bryson, 2021-08-23 Quantitative Methodologies using Multi-Methods is a multifaceted book written to help researchers. It is a user-friendly introduction to the popular methods of data mining and data analysis. The book avoids getting involved into details that are more suitable for more advanced users; it is written for readers who have at most a surface-level knowledge of the methods presented in the book. The book also serves as an introductory guide to the subject of complementarity of the tools and techniques of data analysis. It shows how methods could be used in synergy to offer insights into the issues that could not be dissected by any single method alone. This text can also be used as a set of templates where, given a set of research questions, the investigator could identify a set of methodological modules for answering the research questions of interest. This is not entirely unlike the relationship between the analysis and design phases of the systems development life cycle where the What of the analysis phase has to be translated into the How of the design phase. The book can guide the identification of modules the How that are suitable for answering research questions the What. It can aid in transitioning a conceptual domain of the research questions into a scaffolding of data.

analytic and data mining methods The book is also a guide to exploring what data under investigation holds For example an investigator may use the methodological modules presented in this book to generate a set of preliminary questions which after a careful consideration and a requisite culling could be formulated into a set of questions consistent within a selected theory or a framework Finally the book can be used as a generator of new research questions Applying every method in each of the book s modules opens a new dimension ripe with follow up questions such as Why is this so The answers to this question may provide new insight and lead to the development of a new theory *Computerized Multistage Testing* Duanli Yan,Alina A. von Davier,Charles Lewis,2016-04-19 Unlike other forms of adaptive testing multistage testing MST is highly suitable for testing educational achievement because it can be adapted to educational surveys and student testing This volume provides the first unified source of information on the design psychometrics implementation and operational use of MST It shows how to apply theoretical statistical tools to testing in novel and useful ways It also explains how to explicitly tie the assumptions made by each model to observable or at least inferable data conditions
