

# NFPA 70B 2023: New Guidelines for Electric Inspections

Every three to five years, The National Fire Protection Association (NFPA) updates NFPA 70B, a set of guidelines for creating an effective electrical preventive maintenance (EPM) program commonly used in industrial plants, commercial buildings, and large residential complexes.

NFPA 70B is a key document that drives electrical safety choices in the USA, including methods of electrical inspection, what kinds of equipment should or must be inspected, and who is qualified to inspect. It is important for companies in the USA to review this document and to incorporate the updated standards into their work practices.

The previous NFPA 70B version recommended thermography (aka "infrared scanning") be conducted annually on outdoor substation, switchgear assemblies, stationary batteries, motor control equipment busway, and UPS systems.

In 2023, NFPA 70B makes **mandatory** the inspection of **ALL** electrical equipment at **least every 12 months**, with equipment that meets the Equipment Physical Condition 3 requiring thermographic inspection at least every 6 months. Condition 3 includes equipment where urgent actions were identified in previous scans along with certain other circumstances.
