Duschl, Amber S. Bismack, 2016-01-08 *Reconceptualizing STEM Education* explores and maps out research and development ideas and issues around five central practice themes: Systems Thinking, Model Based Reasoning, Quantitative Reasoning, Equity, Epistemic and Ethical Outcomes, and STEM Communication and Outreach. These themes are aligned with the comprehensive agenda for the reform of science and engineering education set out by the 2015 PISA Framework, the US Next Generation Science Standards, and the US National Research Council's *A Framework for K-12 Science Education*. The new practice-focused agenda has implications for the redesign of preK-12 education for alignment of curriculum, instruction, assessment, STEM teacher education, and professional development, postsecondary, further, and graduate studies, and out of school informal education. In each section, experts set out powerful ideas followed by two eminent discussant responses that both respond to and provoke additional ideas from the lead papers. In the associated website, highly distinguished nationally recognized STEM education scholars and policymakers engage in deep conversations and considerations addressing core practices that guide STEM education.

Automatic Item Generation Mark J. Gierl, Thomas M. Haladyna, 2013 Automatic item generation (AIG) represents a relatively new and unique research area where specific cognitive and psychometric theories are applied to test construction practices for the purpose of producing test items using technology. The purpose of this book is to bring researchers and practitioners up to date on the growing body of research on AIG by organizing in one volume what is currently known about this research area. Part I begins with an overview of the concepts and topics necessary for understanding AIG by focusing on both its history and current applications. Part II presents two theoretical frameworks and practical applications of these frameworks in the production of item generation. Part III summarizes the psychological and substantive characteristics of generated items. Part IV concludes with a discussion of the statistical models that can be used to estimate the item characteristics of generated items. Features: one future application of AIG describes the current technologies used for AIG and also highlights the unresolved issues that must be addressed as AIG continues to mature as a research area. Comprehensive: The book provides a comprehensive analysis of both the theoretical concepts that define automatic item generation and the practical considerations required to implement these concepts. Varied Applications: Readers are provided with novel applications in diverse content areas, e.g., science and reading comprehension that range across all educational levels, elementary through university.

ChatGPT and Other Generative AI Tools Jochen Kuhn, Stefan Küchemann, Knut Neumann, Martina Rau, 2025-02-17 In the past ten years, applications of generative artificial intelligence (GAI) have found rapidly growing use in medicine, science, and daily life. Large language models (LLMs) opened up new avenues in particular for education. LLMs

have been used to create interactive educational content for students stimulate their curiosity generate code explanations and develop assessment questions Additionally LLMs been applied for language practice anxiety alleviation and feedback provision In higher education LLMs have shown potential for assisting in medical exam preparation and clinical decision making In school education LLMs can help teachers with automated evaluation of student responses and respective adaptive feedback More recently LLM based applications such as chatGPT have been used to generate teaching materials or assessment tasks across different subjects The fields understanding of the effects of the use of LLM based applications in classroom teaching however is still in its infancy GAI tools may help solving a range of tasks in education in particular with respect to teachers and students and teachers efforts to generate content However it is critical that teachers and students do not overly rely on GAI generated solutions but instead critically assess each solution Students should furthermore not use GAI tools to avoid investing relevant mental effort to create mental models or more broadly build up competencies
