increasingly accurate and reflects the Web's role as an indispensable treasure trove. It is curious therefore that historians and social scientists have thus far made little use of the Web to investigate historical patterns of culture and society despite making good use of letters, novels, newspapers, radio and television programmes and other pre-digital artefacts. This volume argues that now is the time to ask what we have learnt from the Web so far. The 12 chapters explore this topic from a number of interdisciplinary angles through histories of national web spaces and case studies of different government and media domains as well as an introduction that provides an overview of this exciting new area of research.

Machine Learning and Data Mining in Pattern Recognition Petra Perner, 2018-07-09. This two-volume set LNAI 10934 and LNAI 10935 constitutes the refereed proceedings of the 14th International Conference on Machine Learning and Data Mining in Pattern Recognition MLDM 2018 held in New York, NY, USA in July 2018. The 92 regular papers presented in this two-volume set were carefully reviewed and selected from 298 submissions. The topics range from theoretical topics for classification, clustering, association rule and pattern mining to specific data mining methods for the different multi-media data types such as image mining, text mining, video mining and Web mining.

Machine Learning in Modeling and Simulation Timon Rabczuk, Klaus-Jürgen Bathe, 2023-10-03. Machine learning (ML) approaches have been extensively and successfully employed in various areas like in economics, medical predictions, face recognition, credit card fraud detection and spam filtering. There is clearly also the potential that ML techniques developed in Engineering and the Sciences will drastically increase the possibilities of analysis and accelerate the design to analysis time. With the use of ML techniques coupled to conventional methods like finite element and digital twin technologies, new avenues of modeling and simulation can be opened, but the potential of these ML techniques needs to still be fully harvested with the methods developed and enhanced. The objective of this book is to provide an overview of ML in Engineering and the Sciences, presenting fundamental theoretical ingredients with a focus on the next generation of computer modeling in Engineering and the Sciences in which the exciting aspects of machine learning are incorporated. The book is of value to any researcher and practitioner interested in research or applications of ML in the areas of scientific modeling and computer-aided engineering.

Machine Learning in Insurance Jens Perch Nielsen, Alexandru Asimit, Ioannis Kyriakou, 2020-12-02. Machine learning is a relatively new field without a unanimous definition. In many ways, actuaries have been machine learners. In both pricing and reserving, but also

more recently in capital modelling actuaries have combined statistical methodology with a deep understanding of the problem at hand and how any solution may affect the company and its customers One aspect that has perhaps not been so well developed among actuaries is validation Discussions among actuaries preferred methods were often without solid scientific arguments including validation of the case at hand Through this collection we aim to promote a good practice of machine learning in insurance considering the following three key issues a who is the client or sponsor or otherwise interested real life target of the study b The reason for working with a particular data set and a clarification of the available extra knowledge that we also call prior knowledge besides the data set alone c A mathematical statistical argument for the validation procedure

An Algorithmic Crystal Ball: Forecasts-based on Machine Learning Jin-Kyu Jung,Manasa Patnam,Anna Ter-Martirosyan,2018-11-01 Forecasting macroeconomic variables is key to developing a view on a country s economic outlook Most traditional forecasting models rely on fitting data to a pre specified relationship between input and output variables thereby assuming a specific functional and stochastic process underlying that process We pursue a new approach to forecasting by employing a number of machine learning algorithms a method that is data driven and imposing limited restrictions on the nature of the true relationship between input and output variables We apply the Elastic Net SuperLearner and Recurring Neural Network algorithms on macro data of seven broadly representative advanced and emerging economies and find that these algorithms can outperform traditional statistical models thereby offering a relevant addition to the field of economic forecasting
