**International Relations and Scientific Progress** Patrick James, 2002 International Relations and Scientific Progress contends that a theory focusing on the structure of the international system explains a wider and more interesting range of events in world politics than other theories. Such theorizing appears to be out of favor as the result of the apparent failure by structural realism, the most prominent system level theory over the last two decades on any number of fronts, most notably an inability to anticipate the ending of the Cold War and its aftermath. This new book is put forward as the most comprehensive and innovative theoretical work on paradigms in international relations since the publication of Theory of International Politics which created structural realism more than two decades ago. With appropriate revisions, however, structural realist theory can compete effectively and reclaim its primacy. The first part of International Relations and Scientific Progress assesses the meaning of progress in the discipline of international relations, a process that culminates in the creation of a new concept, the scientific research enterprise. The second part reviews structural realism within that context and identifies a lack of connection between theory and research that links power based indicators to international conflict, crisis and war. This part of the book makes the case for an elaboration of structural realism by showing that a system level theory based on structure has great unrealized explanatory potential. By comparison, the current overwhelmingly research oriented agenda on state dyads imposes severe limitations on understanding that are not currently appreciated. Part Three sums up the work and explores new directions, most notably as related to empirical testing of an elaborated version of structural realism that focuses on both continuity and change in the international system.

**International Relations--Still an American Social Science?** Robert M.A. Crawford, Darryl S.L. Jarvis, 2001-01-01 Challenges the parochialism and Americanization of the field of International Relations

**Systems, Relations, and the Structures of International Societies** Jack Donnelly, 2023-11-02 Inspired by recent work in evolutionary, developmental and systems biology, Systems Relations and the Structures of International Societies sketches a robust conception of systems that grounds a new conception of levels of organization, not merely analysis. Understanding international systems as multi-level, multi-actor, complex adaptive systems allows explanations of important features of the world that are inaccessible to dominant causal and rationalist explanatory strategies. It also develops a comprehensive critique of IR's dominant conception of systems and structures, narrow, rigid and unfruitful, and presents a novel conception of the interrelationship of the social production of continuities and the social production of change and sketches models of spatio-political structure that cast new light on the development of international systems, including a distinctive account of the nature of globalization.

**Complexity in World Politics** Neil E. Harrison, 2012-02-01 Despite one hundred years of theorizing, scholars and practitioners alike are constantly surprised by international and global political events. The collapse of communism in Europe, the 1997 Asian financial crisis and 9/11 have demonstrated the inadequacy of current models that

depict world politics as a simple mechanical system Complexity in World Politics shows how conventional theories oversimplify reality and illustrates how concepts drawn from complexity science can be adapted to increase our understanding of world politics and improve policy In language free of jargon the book's distinguished contributors explain and illustrate a complexity paradigm of world politics and define its central concepts They show how these concepts can improve conventional models as well as generate new ideas hypotheses and empirical approaches and conclude by outlining an agenda of theoretical development and empirical research to create and test complex systems theories of issue areas of world politics *The United States' Subnational Relations with Divided China* Czeslaw Tubilewicz, Natalie
