Microalgae Biotechnology for Development of Biofuel and Wastewater Treatment Md. Asraful Alam, Zhongming Wang, 2019-04-30 This book addresses microalgae which represent a very promising biomass resource for wastewater treatment and producing biofuels Accordingly microalgae are also an expanding sector in biofuels and wastewater treatment as can be seen in several high profile start ups from around the globe including Solix Biofuels Craig Venter's Synthetic Genomics PetroSun Chevron Corporation ENN Group etc In addition a number of recent studies and patent applications have confirmed the value of modern microalgae for biofuels production and wastewater treatment systems However substantial inconsistencies have been observed in terms of system boundaries scope the cultivation of microalgae and oil extraction systems production costs and economic viability cost lowering components etc Moreover the downstream technologies and core principles involved in liquid fuel extraction from microalgae cells are still in their early stages and not always adequate for industrial production Accordingly multilateral co operation between universities research institutes governments stakeholders and researchers is called for in order to make microalgae biofuels economical Responding to this challenge the book begins with a general introduction to microalgae and

the algae industry and subsequently discusses all major aspects of microalgal biotechnology from strain isolation and robust strain development to biofuel development refinement and wastewater treatment

Writing and Desire Jonathan Alexander, 2023-06-06 Writing and Desire is a sustained multimovement exploration of how writers particularly queer writers think and feel through desire as central to their writing practice In a time of political social global and ecological unrest how might we understand desire the desire for things to be different the desire for a better world as a crucial dimension of contemporary human experience What might such a recentering of desire offer us personally and politically And how is writing itself as one of the primary ways through which we express and explore ourselves central to the expression and exploration of desire Drawing on recent theoretical work in queer theory and the new materialism Jonathan Alexander studies a range of queer and trans writers and artists who center desire in their practice and argues that conceptualizing writing as desire allows us to reexperience both writing and our world as saturated with our dreams and wishes for change In a book both elegant and unsettling and by turns personal analytic and experimental Alexander challenges us and himself to think about desire and writing as the deepest manifestation of our hopes for the future

Emerging Bioinformatic Tools in Toxicogenomics Danyel Jennen, Paul Jennings, 2020-02-27 Toxicogenomics was established as a merger of toxicology with genomics approaches and methodologies more than 15 years ago and considered of major value for studying toxic mechanisms of action in greater depth and for classification of toxic agents for predicting adverse human health risks While the original focus was on technological validation of in particular microarray based whole genome expression analysis transcriptomics mainly through cross comparing different platforms for data generation MAQC I it was soon appreciated that actually the wide variety of data analysis approaches represents the major source of inter study variation This led to early attempts towards harmonizing data analysis protocols focusing on microarray based models for predicting toxicological and clinical end points and on different methods for GWAS data MAQC II Simultaneously further technological developments geared by increasing insights into the complexity of cellular regulation enabled analyzing molecular perturbations across multiple genomics scales epigenomics and microRNAs metabolomics While these were initially still based on microarray technology this is currently being phased out and replaced by a variety of next generation sequencing based methods enabling exploration of genomic responses to toxicants at even greater depth SEQC I This raises the demand for reliable and robust data analysis approaches ranging from harmonized bioinformatics concepts for preprocessing raw data to non supervised and supervised methods for capturing and integrating the dynamic perturbations of cell function across dose and time and thus retrieving mechanistic insights across multiple regulation scales Traditional toxicology focused on dose dependently determining apical endpoints of toxicity With the advent of toxicogenomics efforts towards better understanding underlying molecular mechanisms has led to the development of the concept of Adverse Outcome Pathways which are basically presented as a structural network of linearly related gene gene interactions regulating key events for inducing

apical toxic endpoints of interest Impulse challenges from exposure of biological systems to toxic agents will however induce a cascade type of events presenting both adverse and adaptive processes thus requiring bioinformatics approaches and methods for complex dynamic data generated not only across dose but clearly also across time Currently time resolved toxicogenomics data sets are increasingly being assembled in the course of large scaled research projects for instance devoted towards developing toxicogenomics based predictive assays for evaluating chemical safety which are no longer animal based

Coupling and Uncoupling: Dynamic Control of Membrane Contacts Dan Zhang,Yasunori Saheki,Benoît Kornmann,Junjie Hu,2021-08-31 *Grain World* ,1910 *Interactions Between China's National Emissions Trading Scheme and Electricity Market: Practices and Policies* Tsun Se Cheong,Xunpeng (Roc) Shi,Yongping Sun,Jian Yu,Xin Yao,2023-11-03 China's national carbon market the world's largest emissions trading scheme ETS kicked off its first online trade recently This can be called a milestone for the country towards the nation's goals of having CO₂ emissions peak before 2030 and achieving carbon neutrality by 2060 China's national ETS initially covers the power sector before being expanded to a much broader set of energy intensive industries On one hand the electricity sector the largest carbon emitting industry is responsible for about 40% of China's emissions and it has great significance to response to global climate change On the other hand the effectiveness of China's ETS will rest on how well it is coordinated with power market regulations and policies In this regard the deepening of reform as well as the advanced technology and its applications in the electricity market will add new challenges and opportunities to electricity trade which in turn influences national ETS Therefore this brings urgency to accurately capture the dynamic interactions between national ETS and electricity market to transform carbon trading into a practical and effective way to decarbonize the power sector
