

Post lab: 2

1. What is/are the purpose(s) of the experiment?

The purpose of the experiment is to help us understand the wide range of scientific principles, including mass changes and flammability

2. Why is heating important in the chemistry lab? Give an example of its use.

In the chemistry lab, heating is significant because it can be utilized to create a physical or chemical change. Heating liquid water, for example, will turn it into gas (vapor). Another reason for the importance of heating is that it can be used to accelerate a change. For example, heat can be used to dissolve salt in water more quickly.

3. How does a Bunsen burner differ from other heating instruments such as hot plates and/or heating mantles?

The Bunsen burner differs from other heating devices such as hot plates or heating mantles in that it uses an open flame to produce heat. A hot plate converts electrical energy into thermal energy, whereas a Bunsen burner converts chemical energy into thermal energy. Heating mantles are used to heat organic liquids that are flammable.

4. When should you *not* use a Bunsen burner?

When working with flammable chemicals or solvents, we should avoid using a Bunsen burner.

5. What is the purpose of the crucible tongs in this experiment?
