Observatory's Indicators for Member Countries Asian Development Bank, 2022-06-01 This report prepared by an Asia Pacific Road Safety Observatory APRSO taskforce analyzes how improving crash and accident data collection can better protect lives on the region's roads It looks at the type of data countries should prioritize and explains why bolstering data quality would help reach targets of halving road injuries and deaths The report considers how other regions share crash statistics APRSO recommends collecting aggregated data that can be used to analyze trends and set strategic priorities In presenting a sample questionnaire for countries the report shows that generating robust data and analysis is key to

improving actions and policies on road safety for the region **Technical Indicators and Safety Design of Freeway in High Altitude Area** Jianbei Liu, 2023-06-23 Qinghai Tibet Plateau has many special characteristics such as low pressure and hypoxia complex geological conditions fragile ecological environment and various bad weather conditions which exerts a negative effect on highway construction and traffic safety It is a huge challenge to build a safe and environment friendly highway on the Tibetan Plateau due to lacking of mature experience around the world Therefore this book was supported by the National Science and Technology Support Program highway construction technology in high altitude and cold regions to research the critical indicators and technologies This book focuses on the driving behavior and typical vehicle characteristics in the high altitude area to put forward a series of geometrical indicators and traffic safety improvement measures based on a great number of ground tests Moreover the relative achievements were applied to the demonstration project and validate the feasibility of indicators and countermeasures It is of practical and leading significance for highway construction and improving the traffic level in the Qinghai Tibet Plateau CAREC Road Safety Engineering Manual 5 Asian Development

Sierpiński, 2021-04-15 This book presents many valuable research methods useful in conducting research in modern urban transportation systems and networks The knowledge base in practical examples as well as the decision support methods described in this book is of interest to people who face the challenge of searching for solutions to the problems of contemporary transport networks and systems on a daily basis The book is therefore addressed to local authorities related to the planning and development of strategies for selected areas with regard to transport both in the urban and regional

dimensions and to representatives of business and industry as people directly involved in the implementation of urban transportation systems and networks solutions The methods contained in individual chapters of the book allow to look at a given problem in an advanced way and facilitate the selection of the appropriate strategy e g in relation to the air quality in considering the impact of the atmospheric emission from the urban road traffic the role of incentive programs in promoting the purchase of electric cars life cycle costing decision making methodology and urban intersection design but also in assessing the impact of the socio financial conditions on the bike sharing system operation and its implementation in medium sized cities etc In turn due to the new approach to theoretical models including comparison methods of driving errors in a single lane and multi lane roundabouts methods of parking measurements methods of ensuring the technical readiness of transport companies fleet due to the region s capabilities as well as speed related surrogate measures of road safety based on floating car data the book is also of interest to scientists and researchers carrying out research in this area

E Motion Bortolotto, Susanna, Cheli, Federico, 2021-01-21 The aim of the EMotion project is to combine both technological aspects and respect for the territory and its history The main axis considered in this project is the Asmara Massawa road The challenges of a new mobility in this part of Eritrea could be met and overcome by preserving the pre existing historic infrastructure an extraordinary and vulnerable cultural heritage consisting of a unique road and a railway crossing natural and cultural landscapes and connecting archaeological historical artistic and architectural sites the road itself is a summation of artefacts and monuments to be protected and enhanced A multidisciplinary team including archaeologists architects geologists and engineers has contributed to the research The vision of the project represents an ideal and real bridge to enhance the transferring of goods ideas knowledge and values and promote the connection of people
