

Roberts RIC. 1

Solid state portable radio receiver

1884

An outstanding feature of the Roberts RJC-1 battery operated radio receiver is the incorporation of an improved circuit design, a small space consuming in many respects of seven transistors, and a reduced size chassis. The RJC-1 is a complete, ready to use receiver, and the required degree of selectivity is achieved by means of a crystal filter.

Manufactured covered two main, 5802-0001s, (1,600-5400) and two, 5,100-2,000ms (200-5000), respectively, was within the intended finite rod pedal assembly on a bar-type serial bar which a single point co-axial socket is fitted at the top of the case adjacent to the volume control knob.

Compensating symmetry is employed in the new receiver. A variable notch filter driven by 3500 Hz extracted from the receiver's processor can either output power in excess of 50W, a normally allocated miniature jack located at the top of the case adjacent to the tuning control knob, enabled in response to be connected for personal listening, or at same time muting the internal

Operating power is supplied by a 9V battery (Energizer type 910 or its equivalent).

Abstract

Voltages quoted in the table, col. 2, were obtained from data supplied by the manufacturers and are all positive with respect to battery negative. There was no signal input, the volume control was at minimum and they were measured as a 20,000ohm/v source.

Chondrostoma toxostoma (L.) (Cyprinidae)
