Physics and the Environment Kyle Forinash,2017-07-05 Physics and the Environment directly connects the physical world to environmental issues that the world is facing today and will face in the future It shows how the first and second laws of thermodynamics limit the efficiencies of fossil fuel energy conversions to less than 100% while also discussing how clever technologies can enhance overall performance It also extensively discusses renewable forms of energy their physical constraints and how we must use science and engineering as tools to solve problems instead of opinion and politics Dr Kyle Forinash takes you on a journey of understanding our mature and well developed technologies for using fossil fuel resources and how we are unlikely to see huge gains in their efficiency as well as why their role in climate change ought to be an argument for their replacement sooner rather than later He also discusses the newest technologies in employing renewable resources and how it is important to understand their physical constraints in order to make a smooth transition to them An entire chapter is dedicated to energy storage a core question in renewable energy as well as another chapter on the technical issues of nuclear energy The book ends with a discussion on how no environmental solution no matter how clever from a technical aspect will succeed if there are cheaper alternative even if those alternatives have undesirable features associated with them

Biosemiotic Medicine Farzad Goli, 2016-08-02 This book presents an interpretation of pharmaceutical surgical and psychotherapeutic interventions based on a univalent metalanguage biosemiotics. It proposes that a metalanguage for the physical mental social and cultural aspects of health and medicine could bring all parts and aspects of human life together and thus shape a picture of the human being as a whole made up from the heterogeneous images of the vast variety of sciences and technologies in medicine discourse. The book adopts a biosemiotics clinical model of thinking because similar to the ancient principle of alchemy *tam ethice quam physice* everything in this model is physical as much as it is mental. Signs in the forms of vibrations molecules cells words images reflections and rites conform cultural mental physical and social phenomena. The book decodes healing dealing with health illness and therapy by emphasizing the first person experience as well as objective events. It allows readers to follow the energy information flows through and between embodied minds and to see how they form physiological functions such as our emotions and narratives.

Towards a Framework for Representational Competence in Science Education Kristy L. Daniel, 2018-06-20 This book covers the current state of thinking and what it means to have a framework of representational competence and how such theory can be used to shape our understanding of the use of representations in science education assessment and instruction. Currently there is not a consensus in science education regarding representational competence as a unified theoretical framework. There are multiple theories of representational competence in the literature that use differing perspectives on what competence means and entails. Furthermore dependent largely on the discipline language discrepancies cause a potential barrier for merging ideas and pushing forward in this area. While a single unified theory may not be a

realistic goal there needs to be strides taken toward working as a unified research community to better investigate and interpret representational competence An objective of this book is to initiate thinking about a representational competence theoretical framework across science educators learning scientists practitioners and scientists As such we have divided the chapters into three major themes to help push our thinking forward presenting current thinking about representational competence in science education assessing representational competence within learners and using our understandings to structure instruction
