Environmental Radiobiology Paul N. Schofield,Carmel E. Mothersill,2023-10-17 This book focuses on the impacts of anthropogenic radiation on wildlife and ecosystems and provides an in depth look at the approaches and available tools we can use to gain information about biological effects of radiation in the environment The nuclear accidents in Chornobyl in 1986 and Fukushima in 2011 focussed the attention of the world on the vulnerability of ecosystems to radiation In Chornobyl there still remains an exclusion zone where levels are considered to be too high for people and impacts on terrestrial and aquatic ecosystems can still be measured 35 years later In the area impacted by the Fukushima disaster intense remediation is still under way at tremendous cost and causing widespread disruption to the environment That accident impacted the terrestrial and marine ecosystems In both accidents it became obvious that a radiation protection framework focussing on protection of humans a single species and using evacuation as a key strategy was not sufficient to protect the natural environment The complexity of ecosystems makes developing a protection framework very challenging but in order to even start the process it is vital to gather information about likely impacts of low dose exposures on wildlife and to develop monitoring tools to measure changes over time This book contains reviews and original research aimed at filling our knowledge gaps about these important areas Environmental Radiobiology will be a key resource for academics researchers and advanced students of Radiobiology Radioecology Biology Ecology Biomedicine and Research Methods The chapters included in this book were originally published as a special issue of International Journal of Radiation Biology Laboratory Manual of Human Anatomy and Physiology II Dr. Remeth J. Kazi,2024-02-16 We are very happy to put forth Laboratory Manual of Human Anatomy Physiology II We have made this manual student friendly and relevant in terms of achieving curriculum outcome Now we believe that the manual has been fulfilling the aspirations of teachers and students too This manual is prepared as per PCI Education Regulations 2014 for degree course in pharmacy The methods of all the experiments are reviewed and added from the recent research papers so that the advancement in the methods or apparatus can be addressed This manual is designed for Outcome Based Education and each experiment is arranged in a uniform way such as practical significance practical outcomes PrOs and its mapping with course outcomes minimum theoretical background resources used procedure precautions observations result conclusion references and related questions Moreover assessment scheme is also given to help the student and teacher to know what to be assessed This manual contains all the practicals suggested and given in the syllabus In addition we have divided each experiment into various parts that make the students understanding easier Moreover it will also help the students to find out

the resource material required and what they should use In each experiment the questions are given as Questions Identified that are incorporated for both teacher and students to learn more about the practicals We have also included the references for learning more if needed by the teacher or student The manual also focuses on the student s skill and learning hence each experiment is having activity for the students In addition if the teacher feels that he should assign some more activity or other than included in the experiment he can We acknowledge the help and co operation extended by various persons in bringing out this manual We are highly indebted to the authors of various books and articles mentioned in references or further reading material which became a major source of information for writing this manual We also thank the publishers designers and printers who graciously worked hard to publish this manual in time Lasers in Cardiovascular Interventions On Topaz,2015-11-05 Since the introduction of laser devices to the medical sciences this technology has created great interest Specifically the laser s unique physical properties and precise bio tissue interactions render this versatile source of biologic energy an attractive tool for multiple therapeutic purposes in cardiovascular medicine Over the course of the last 2 decades the utilization of laser technology has become an important component for the management of patients with complex cardiovascular diseases During this time period cutting edge laser technology including a variety of wave length generators newly designed catheters and a selection of advanced optic fibers have been introduced and applied in the cardiovascular circulation Improved lasing techniques in the cardiac catheterization suites and operation rooms have been implemented for treatment of ischemic coronary syndromes peripheral arterial occlusive disease and other atherosclerotic thrombotic conditions Moreover during this 20 year time frame several multicenter and single center clinical studies have been published focusing on the role and utilization of lasers in coronary and peripheral revascularization And within the rapidly expanding field of interventional cardiac electrophysiology laser technology has recently revolutionized the management of fractured abandoned and malfunctioning leads of cardiac pacemakers and automatic defibrillators Consequently replacing a notoriously cumbersome and high risk open heart surgery with safe and markedly efficient percutaneous laser based extraction This textbook will provide the most authoritative comprehensive and contemporary information covering technological progress clinical experience and pertinent aspects of laser applications in cardiovascular medicine It will be of interest to cardiologists vascular surgeons and interventional radiologist as well as medical students scientists biomedical engineering students and graduates
