into the atmosphere are the combustion of fossil fuels coal natural gas and oil to generate electricity the provision of energy for transportation and as a consequence of some industrial processes Although aviation CO₂ emissions only make up approximately 2.0 to 2.5 percent of total global annual CO₂ emissions research to reduce CO₂ emissions is urgent because 1 such reductions may be legislated even as commercial air travel grows 2 because it takes new technology a long time to propagate into and through the aviation fleet and 3 because of the ongoing impact of global CO₂ emissions Commercial Aircraft Propulsion and Energy Systems Research develops a national research agenda for reducing CO₂ emissions from commercial aviation This report focuses on propulsion and energy technologies for reducing carbon emissions from large commercial aircraft single aisle and twin aisle aircraft that carry 100 or more passengers because such aircraft account for more than 90 percent of global emissions from commercial aircraft Moreover while smaller aircraft also emit CO₂ they make only a minor contribution to global emissions and many technologies that reduce CO₂ emissions for large aircraft also apply to smaller aircraft As commercial aviation continues to grow in terms of revenue passenger miles and cargo ton miles CO₂ emissions are expected to increase To reduce the contribution of aviation to climate change it is essential to improve the effectiveness of ongoing efforts to reduce emissions and initiate research into new approaches

[Experimental and Numerical Simulations of Rock Physics](#) Huaimin Dong, Yihuai Zhang, Weichao Yan, 2025-09-01 Rock physics experiments and numerical simulations are indispensable tools in geology and mineral resources exploration Experiments can provide real data on the physical properties of rocks while numerical simulations can reproduce these properties and predict behavior under unknown

conditions on a computer Understanding the physical properties of rocks is crucial in energy source exploration and development Rock physics experiments can perform various tests on samples under controlled environments These experiments can provide real data on the physical properties In contrast numerical simulations have the advantages of low cost and high flexibility Through numerical simulations the physical properties of rocks can be reproduced on a computer and their behavior under unknown conditions can be predicted Combining rock physics experiments with numerical simulations can provide a more comprehensive understanding of the physical properties of rocks and offer more accurate data support for energy source exploration and development **2025-26 BPSC TRE 4 & 5 Class-I to XII General**
