Dynamic systems theory and embodiment in psychotherapy research. A new look at process and outcome Sergio Salvatore, Wolfgang Tschacher, Omar Carlo Gioacchino Gelo, Sabine C Koch, 2016-04-11 In an attempt to cease from reducing the world and its emergent phenomena to linear modeling and analytic dissection Dynamic Systems Theories DST and Embodiment theories and methods aim at accounting for the complex dynamic and non linear phenomena that we constantly deal with in psychology For instance DST and

Embodiment can enrich psychology's understanding of the communicative process both in clinical and non clinical settings. In psychotherapy, an important amount of research has shown that next to other ingredients, the therapeutic relationship is the most important active factor contributing to psychotherapy outcome. These findings give communication a central role in the psychotherapy process. In the traditional view, the underlying model of understanding psychotherapy processes is that of a number of components summatively coming together, enabling us to make a linear causal prediction. Yet, communication is inherently dynamic. A shift to viewing the communication process in psychotherapy as a field dynamic phenomenon helps us to take into account nonlinear phenomena such as feedback processes within and between persons. We thus propose an embodied enactive dynamic systems view as a new theoretical and methodological perspective that can more realistically capture what happens among and between two persons in psychotherapy. This view reaches beyond the current narrow model of psychotherapy research. DST and Embodied Enactive Approaches can offer solutions to the loss of nonlinear phenomena, the complex dynamics of reality, and the holistic level of analysis. DST and Embodied Enactive Approaches have developed not in a single discipline but in a joined movement based on various fields such as physics, biology, robotics, anthropology, philosophy, linguistics, neuroscience, and psychology, and have only recently entered clinical theorizing. The two new paradigms have already triggered a rethinking of the therapeutic exchange by recognizing the embodied nature of psychological and communicative phenomena. Their integration opens up a promising scenario in the field of psychotherapy research, developing new profoundly transdisciplinary theoretical concepts, methodologies, and standards of knowledge. The notion of field dynamics enables us to account for the role of the communicational context in the regulation of intra psychological processes while at the same time avoiding the pitfalls of an ontologization of the hierarchy of systemic organization. Moreover, the new approach implements methodological strategies that can transcend the conventional opposition between idiographic and nomothetic sciences.

Research Methods and Design Beyond a Single Discipline

Heting Chu, 2024-04-01

Research Methods and Design Beyond a Single Discipline presents and discusses 15 research methods after an overview of each, an illustration of the research process, and an examination of related topics. The focus of this book is on data collection techniques, e.g., interviewing, observation, questionnaires, and research design. Research methods are named and categorized by data collection techniques in this book rather than by the quantitative and qualitative dichotomy used for data analysis techniques. Each of the 15 research methods included in the book is depicted regarding its functions, features, applications, and dos and don'ts with examples and case studies from various disciplines. Research methodology development in research design starts with selection of data collection techniques, which takes into consideration research questions of a study and research method features. Data analysis techniques and selection are described as part of the research methodology development to help readers choose the most appropriate methodology for their own research and put research design into practice. This book is essential for masters and doctoral students and

researchers who wish to learn about research methods and design comprehensively and systematically as well as instructors delivering research methods courses across the social and behavioral sciences
