

INTRODUCTION

The rhinoceros is a large primitive looking mammal often referred to as our “modern dinosaur”. In recent decades rhinos have been relentlessly hunted to the point of near extinction. Since 1970 the world rhino population has declined by 90% with 5 species remaining in the world. All of which are endangered.

The demand for rhino horn, especially in Asian countries like Vietnam, have risen tremendously. This has now unfortunately caused the poaching of these species to accelerate to such an extent that the possibility of permanently losing them has become a reality that, not just South Africa, but the rest of the world faces as well.
