Design for Rethinking Resources Mette Ramsgaard Thomsen, Carlo Ratti, Martin Tamke, 2023-11-16 The book provides new perspectives from leading researchers accentuating and examining the central role of the built environment in conceiving and implementing multifaceted solutions for the complex challenges of our understanding of planetary resources and circularity, revealing critical potentials for architecture and design to contribute in more informed and long-term ways to the urgent transition of our society. The book offers a compilation of peer-reviewed papers that uniquely connects knowledge broadly across practice and academia from the newest technologies and methods such as the role of digital modelling, analysis, and fabrication in circular design, i.e. material passports, cyber-physical augmentation, and LCA to the potentials of growing and harvesting biomass, materials engaging waste streams in material production, and more, all in context of economic, social, and ecological potentials and consequences. The book is part of a series of six volumes that explore the agency of the built environment in relation to the SDGs through new research conducted by leading researchers. The series is led by editors Mette Ramsgaard Thomsen and Martin Tamke in collaboration with the theme editors: Design for Climate Adaptation Billie Faircloth and Maibritt Pedersen Zari; Design for Rethinking Resources Carlo Ratti and Mette Ramsgaard Thomsen; Eds Design for Resilient Communities Anna Rubbo and Juan Du; Eds Design for Health Arif Hasan and Christian Benimana; Eds Design for Inclusivity Magda Mostafa and Ruth Baumeister; Eds Design for Partnerships for Change Sandi Hilal and Merve Bedir.

Design and Analysis of Tall and Complex Structures Feng Fu, 2018-02-01 The design of tall buildings and complex structures involves challenging activities including scheme design, modelling, structural analysis, and detailed design. This book provides structural designers with a systematic approach to anticipate and solve issues for tall buildings and complex structures. This book begins with a clear and rigorous exposition of theories behind designing tall buildings. After this is an explanation of basic issues encountered in the design process. This is followed by chapters concerning the design and analysis of tall buildings with different lateral stability systems such as MRF, shear wall, core, outrigger, bracing, tube system, diagrid system, and mega frame. The final three chapters explain the design principles and analysis methods for complex and special structures. With this book, researchers and

The consideration spans over but not limited to computational design, virtual experience, digital fabrication, artificial intelligence and sustainability environment. Readers of the proceedings will benefit from discussions on how adoption of new technologies can benefit the Construction Industry rather than just for the sake of leveraging new technologies. The book targets scholars and high education level students as well as Ph.D.s whose research falls into the broad realm of digital design.

Mesh Generation and Adaptation Rubén Sevilla, Simona Perotto, Kenneth Morgan, 2022-05-18 The developments in mesh generation are usually driven by the needs of

new applications and or novel algorithms The last decade has seen a renewed interest in mesh generation and adaptation by the computational engineering community due to the challenges introduced by complex industrial problems Another common challenge is the need to handle complex geometries Nowadays it is becoming obvious that geometry should be persistent throughout the whole simulation process Several methodologies that can carry the geometric information throughout the simulation stage are available but due to the novelty of these methods the generation of suitable meshes for these techniques is still the main obstacle for the industrial uptake of this technology This book will cover different aspects of mesh generation and adaptation with particular emphasis on cutting edge mesh generation techniques for advanced discretisation methods and complex geometries
