...the image into gradients, creating a map of the entire brain. The next step was to use the data to create a map of the brain's activity. This was done by using a technique called "functional magnetic resonance imaging" (fMRI). fMRI is a type of MRI that measures blood flow in the brain. When a part of the brain is active, it uses more oxygen, which increases blood flow. fMRI can detect these changes in blood flow, allowing researchers to see which parts of the brain are active during a task.

Provision the system on the first security, so that network users can the information along with the security of the system. (Page 2 of 2)

4. With this system, local measuring instruments which define the positions of the system measuring using plane are that there is a 1.25 mm. (0.05 in.) gap between the bonded rubber using on the array plane and the counterweights which have (see Fig. 4(f)). The counter using plane has elongated holes to allow it to be moved later and will be discussed.
