The Filth Disease Jacob Steere-Williams, 2020 Shows how the investigation of local outbreaks of typhoid fever in Victorian Britain led to the emergence of the modern discipline of epidemiology as the leading science of public health Typhoid fever is a food and water borne infectious disease that was insidious and omnipresent in Victorian Britain It was one of the most prolific diseases of the Industrial Revolution There was a palpable public anxiety about the disease in the Victorian era no doubt fueled by media coverage of major outbreaks across the nation but also because Queen Victoria's husband Prince Albert died of the disease in 1861 Their son and heir Prince Albert Edward contracted and nearly succumbed to typhoid a decade later in 1871 The Filth Disease shows that typhoid was at the center of a number of critical debates about health science and governance Victorian public health reformers the book argues working in central and local government framed typhoid as the most pressing public health problem in order to persuade local officials to implement sanitary infrastructure to prevent the spread of disease In this period British epidemiologists uncovered how typhoid is spread via food and water supplies disrupting the longstanding idea that typhoid was spread via filth In the process the modern discipline of epidemiology emerged as the chief science of public health Typhoid was as much a social and political problem as it was a scientific one and The Filth Disease provides a striking reminder of the cultural context in which infectious diseases strike populations and how scientists study them

The Cloud Revolution Mark P. Mills, 2021-11-02 The conventional wisdom on how technology will change the future is wrong Mark Mills lays out a radically different and optimistic vision for what's really coming The mainstream forecasts fall into three camps One considers today as the new normal where ordering a ride or food on a smartphone or trading in bitcoins is as good as it's going to get Another foresees a dystopian era of widespread digitally driven job and business destruction A third believes that the only technological revolution that matters will be found with renewable energy and electric cars But according to Mills a convergence of technologies will instead drive an economic boom over the coming decade one that historians will characterize as the Roaring 2020s It will come not from any single big invention but from the confluence of radical advances in three primary technology domains microprocessors materials and machines Microprocessors are increasingly embedded in everything Materials from which everything is built are emerging with novel almost magical capabilities And machines which make and move all manner of stuff are undergoing a complementary transformation Accelerating and enabling all of this is the Cloud history's biggest infrastructure which is itself based on the building blocks of next generation microprocessors and artificial intelligence We've seen this pattern before The technological revolution that drove the great economic expansion of the twentieth century can be traced to a similar confluence one that was first visible in the 1920s a new information infrastructure telephony new machines cars and power plants and new materials plastics and pharmaceuticals Single inventions don't drive great long cycle booms It always takes convergent revolutions in technology's three core spheres information materials and machines Over history that's only happened a few times We have wrung much magic from the

technologies that fueled the last long boom But the great convergence now underway will ignite the 2020s And this time unlike any previous historical epoch we have the Cloud amplifying everything The next long boom starts now *Coasts and Estuaries* Eric Wolanski, John W. Day, Michael Elliott, Ramachandran Ramesh, 2019-01-24 *Coasts and Estuaries The Future* provides valuable information on how we can protect and maintain natural ecological structures while also allowing estuaries to deliver services that produce societal goods and benefits These issues are addressed through chapters detailing case studies from estuaries and coastal waters worldwide presenting a full range of natural variability and human pressures Following this a series of chapters written by scientific leaders worldwide synthesizes the problems and offers solutions for specific issues graded within the framework of the socio economic environmental mosaic These include fisheries climate change coastal megacities evolving human nature interactions remediation measures and integrated coastal management The problems faced by half of the world living near coasts are truly a worldwide challenge as well as an opportunity for scientists to study commonalities and differences and provide solutions This book is centered around the proposed DAPSI W R M framework where drivers of basic human needs requires activities that each produce pressures The pressures are mechanisms of state change on the natural system and Impacts on societal welfare including well being These problems then require responses which are the solutions relating to governance socio economic and cultural measures Scharin et al 2016 Covers estuaries and coastal seas worldwide integrating their commonality differences and solutions for sustainability Includes global case studies from leading worldwide contributors with accompanying boxes highlighting a synopsis about a particular estuary and coastal sea making all information easy to find Presents full color images to aid the reader in a better understanding of details of each case study Provides a multi disciplinary approach linking biology physics climate and social sciences *Scientific and Technical Aerospace Reports*, 1994 Lists citations with abstracts for aerospace related reports obtained from world wide sources and announces documents that have recently been entered into the NASA Scientific and Technical Information Database [Aerosol processes in the Planetary Boundary Layer: High resolution Aerosol Mass Spectrometry on a Zeppelin NT Airship](#) Florian Rubach, 2014-03-24 **Graphene Science Handbook** Mahmood Aliofkhazraei, Nasar Ali, William I. providing methodological and theoretical basis as well as case references for sustainable logistics systems using AI based meta heuristics Most of multi national enterprises today face the challenge of sustainable development for their logistics systems trying to meet or exceed customer expectations Sustainable development attracts both researchers and industrial practitioners who are focused on the design and implementation of logistics system AI based meta heuristics approaches has emerged as a capable method for quickly providing optimal or near optimal solutions for the problems that exact optimization cannot solve Recent advances in various AI based meta heuristics approaches can resolve various and complex logistics and supply chain problem types This book mainly encompasses the most popular and frequently employed AI based meta heuristics approaches such as genetic algorithm variable neighborhood search multi objective heuristic search and the hybrid of these approaches The chapters in this book were originally published in the International Journal of Management Science and Engineering Management *Exploring the Northern Rocky Mountains* Colin Arthur Shaw,Basil Tikoff,2014-05-01 The field trips in this guidebook are associated with the GSA Rocky Mountain Cordilleran Joint Section Meeting which will take place in Bozeman Montana in May 2014 Contaminants of the Great Lakes Jill Crossman,Chris Weisener,2020-09-17 This book reviews the globally important freshwater resource of the Great Lakes which is currently threatened by contaminants that compromise water quality and impact its ecological and economic health Divided into four parts this volume covers historic current and emerging sources of contamination from heavy metals and persistent organic pollutants to microplastics and identifies their ecological impacts Due to factors ranging from rapidly changing land use practices climate change and our emerging understanding of their impact on biological chemical and physical interactions the effectiveness of management strategies has proven highly variable Continued enhancements in the rate of lake recovery are required to sustain the health of the Great Lakes Accordingly the book also explores recent advances in contaminant detection along with future steps forward in lake management approaches Revealing our current knowledge gaps and providing a roadmap towards sustainable solutions the book offers a valuable asset for scientists managers and the public alike
