Getting Started with Macros

First, let's answer the question: "what are macros, and why would you use them"? Macros are programs that are designed to help you save time, by automating repetitive tasks. Each macro performs a series of pre-defined steps to accomplish a particular task. The steps should be repeatable and the actions predictable.

For example, you might define a macro to add a grid to your project, to rotate a selected object, or to collect information about the square footage of all the rooms in your structure. Other general examples include:

- Locating and extracting Revit content to external files
- Tweaking geometry or parameters
- Creating many types of elements
- Importing and exporting external file formats

Revit provides an Application Programming Interface (API) that allows you to extend the functionality of the product. Experienced developers and Autodesk partners may already know that the Revit API lets them add customized commands to the Tools > External Commands menu, or add new menus and toolbars.
