Eco-efficient Masonry Bricks and Blocks Fernando Pacheco-Torgal, Paulo B. Lourenco, Joao Labrincha, Prinya Chindaprasirt, S Kumar, 2014-11-27 Masonry walls constitute the interface between the building s interior and the outdoor environment Masonry walls are traditionally composed of fired clay bricks solid or perforated or blocks concrete or earth based but in the past and even in the present they were often associated as needing an extra special thermal and acoustical insulation layer However over more recent years investigations on thermal and acoustical features has led to the development of new improved bricks and blocks that no longer need these insulation layers Traditional masonry units fired clay bricks concrete or earth based blocks that don t offer improved performance in terms of thermal and acoustical insulation are a symbol of a low technology past that are far removed from the demands of sustainable construction This book provides an up to date state of the art review on the eco efficiency of masonry units particular emphasis is placed on the design properties performance durability and LCA of these materials Since masonry units are also an excellent way to reuse bulk industrial waste the book will be important in the context of the Revised Waste Framework Directive 2008 98 EC which states that the minimum reuse and recycling targets for construction and demolition waste CDW should be at least 70% by 2020 On the 9th of March 2011 the European Union approved the Regulation EU 305 2011 known as the Construction Products Regulation CPR and it will be enforced after the 1st of July 2013 The future commercialization of construction materials in Europe makes their environmental assessment mandatory meaning that more information related to the environmental performance of building materials is much needed Provides an authoritative guide to the eco efficiency of masonry units Examines the reuse of waste materials Covers a range of materials including clay cement earth and pumice

Advanced Modelling Techniques in Structural Design Feng Fu, 2015-03-26 The successful design and construction of iconic new buildings relies on a range of advanced technologies in particular on advanced modelling techniques In response to the increasingly complex buildings demanded by clients and architects structural engineers have developed a range of sophisticated modelling software to carry out the necessary structural analysis and design work Advanced Modelling

Techniques in Structural Design introduces numerical analysis methods to both students and design practitioners. It illustrates the modelling techniques used to solve structural design problems covering most of the issues that an engineer might face including lateral stability design of tall buildings, earthquake progressive collapse, fire blast and vibration analysis, non linear geometric analysis and buckling analysis. Resolution of these design problems are demonstrated using a range of prestigious projects around the world including the Buji Khalifa, Willis Towers Taipei 101, the Gherkin, Millennium Bridge, Millau viaduct and the Forth Bridge, illustrating the practical steps required to begin a modelling exercise and showing how to select appropriate software tools to address specific design problems.
