Warm-up

Remember For each classroom slide, students is a "Read-Think-Write" activity. Read the slide, think about the content, and write your thoughts in the space provided.

Slide 1: Warm-up: What are metamorphic rocks? How do they form? What are some examples of metamorphic rocks? Write your answers in the space provided.

Activity: Managing Metamorphic Rocks

Metamorphic rocks are formed from pre-existing rocks (igneous, sedimentary, or metamorphic) through the process of metamorphism. This process involves changes in temperature, pressure, and chemical environment, which cause the minerals in the rock to recrystallize and form new minerals. The resulting rock has a different texture and composition than the original rock.

Metamorphic rocks are classified based on the type of parent rock (protolith) and the conditions of metamorphism. The two main types of metamorphic rocks are foliated and non-foliated. Foliated rocks have a layered or banded appearance, while non-foliated rocks do not.
