platform to build, deploy, customize and upgrade applications. This book will take you through the architecture of building an application on the Lightning platform to help you understand its features and best practices and ensure that your app keeps up with your customers' increasing needs as well as the innovations on the platform. This book guides you in working with the popular aPaaS offering from Salesforce, the Lightning Platform. You'll see how to build and ship enterprise-grade apps that not only leverage the platform's many productivity features but also prepare your app to harness its extensibility and customization capabilities. You'll even get to grips with advanced application architectural design patterns such as Separation of Concerns, Unit Testing, and Dependency Integration. You will learn to use Apex and JavaScript with Lightning Web Components, Platform Events, among others, with the help of a sample app illustrating patterns that will ensure your own applications endure and evolve with the platform. Finally, you will become familiar with using Salesforce DX to develop, publish, and monitor a sample app and experience standard application life cycle processes along with tools such as Jenkins to implement CI/CD. By the end of this book, you will have learned how to develop effective business apps and be ready to explore innovative ways to meet customer demands. What you will learn: Create and deploy AppExchange packages and manage upgrades; Understand Enterprise Application Architecture patterns; Customize mobile and desktop user experience with Lightning Web Components; Manage large data volumes with asynchronous processing and big data strategies; Implement Source Control and Continuous Integration; Add AI to your application with Einstein; Use Lightning External Services to integrate external code and data with your Lightning Application. Who this book is for: This book is for Lightning platform developers who want to discover the true potential of the platform to develop complex, scalable applications for use in enterprise businesses. *Salesforce.com Lightning Process Builder and Visual Workflow* Jonathan Keel, 2016-11-25. Learn how to build logic into your apps by configuring Salesforce.com Lightning Process Builder and Visual Workflow software tools to meet the needs of your organization without the use of code. You will be able to build workflow diagrams on the Salesforce.com platform and perform complex logic. Individuals who have created workflow diagrams in other applications, e.g. Microsoft Visio, will feel very comfortable using these two tools from Salesforce. If you find yourself in a situation where a standard Salesforce configuration does not meet your needs, you can always rely on a developer to extend the functionality through Visualforce and Apex code. What if you could take back that control and not rely on a developer or consultant? With two new technologies, Process Builder and Visual Workflow, introduced onto the Salesforce.com platform, you can accomplish much of what was normally handled with Apex code. Lightning Process Builder and Visual Workflow both allow for advanced logic that standard configuration, such as Salesforce.com Workflow, cannot do. Salesforce.com Lightning Process Builder and Visual Workflow details how these technologies can be used to: Create a call center application that guides operators through a call with screens that change based on the caller's responses; Automatically submit approvals to speed up and streamline your business; Update related records for any object being modified, including standard and custom objects. *Learning*
