participated in a correlation study of the necessary thickness of pavement to carry a range of single and tandem axle loads
The results summarized and discussed in this paper show that the different design methods used by the different agencies
gave some rather large variations in the thicknesses of pavement as designed for the specified traffic 7th RILEM
International Conference on Cracking in Pavements A. Scarpas, Niki Kringos, I. Al-Qadi, Loizos A., 2012-08-30 In the recent
past new materials laboratory and in situ testing methods and construction techniques have been introduced In addition
modern computational techniques such as the finite element method enable the utilization of sophisticated constitutive
models for realistic model based predictions of the response of pavements The 7th RILEM International Conference on
Cracking of Pavements provided an international forum for the exchange of ideas information and knowledge amongst
experts involved in computational analysis material production experimental characterization design and construction of
pavements All submitted contributions were subjected to an exhaustive refereed peer review procedure by the Scientific
Committee the Editors and a large group of international experts in the topic On the basis of their recommendations 129
contributions which best suited the goals and the objectives of the Conference were chosen for presentation and inclusion in
the Proceedings The strong message that emanates from the accepted contributions is that by accounting for the
idiosyncrasies of the response of pavement engineering materials modern sophisticated constitutive models in combination
with new experimental material characterization and construction techniques provide a powerful arsenal for understanding
and designing against the mechanisms and the processes causing cracking and pavement response deterioration As such
they enable the adoption of truly mechanistic design methodologies The papers represent the following topics Laboratory
evaluation of asphalt concrete cracking potential Pavement cracking detection Field investigation of pavement cracking
Pavement cracking modeling response crack analysis and damage prediction Performance of concrete pavements and white
toppings Fatigue cracking and damage characterization of asphalt concrete Evaluation of the effectiveness of asphalt
concrete modification Crack growth parameters and mechanisms Evaluation quantification and modeling of asphalt healing
properties Reinforcement and interlayer systems for crack mitigation Thermal and low temperature cracking of pavements
and Cracking propensity of WMA and recycled asphalts National Union Catalog , 1978 *Proceedings of the ...*
