Guide to Wireless Ad Hoc Networks Sudip Misra, Isaac Woungang, Subhas Chandra Misra, 2009-03-02 Overview and Goals Wireless communication technologies are undergoing rapid advancements The past few years have experienced a steep growth in research in the area of wireless ad hoc networks The attractiveness of ad hoc networks in general is attributed to their characteristics features such as ability for infrastructure less setup minimal or no reliance on network planning and the ability of the nodes to self organize and self configure without the involvement of a centralized n work manager router access point or a switch These features help to set up a network fast in situations where

there is no existing network setup or in times when setting up a fixed infrastructure network is considered infeasible for example in times of emergency or during relief operations Even though ad hoc networks have emerged to be attractive and they hold great promises for our future there are several challenges that need to be addressed Some of the well known challenges are attributed to issues relating to scalability quality of service energy efficiency and security The Network Designer's Handbook A. M. Jones, 1997 The Network Designer's Handbook will help anyone trapped between limited bandwidth fault intolerant computer buses and expensive over engineered telecommunications technology It will help anyone looking for new cost effective ways to build LAN switches RAID systems multimedia servers or multiprocessors It will help the small company looking for an edge to break into the market and the large one looking for ways to improve its margins and boost its market share This handbook the result of over six man years of effort at the PACT Research Institute provides solid engineering data for the computer systems professional Four cpu months of system simulation are summarised in an easy to read form allowing the consequences of different design decisions to be simply compared The Network Designer's Handbook explains the principles of the new generation of small scale low buffer serial interconnects Using the specific example of IEEE 1355 1995 links and the STC104 high valency switch chip it shows how this technology can provide modular fault tolerant and scalable interconnect The picture is rounded out with descriptions of network topologies case studies and many practical tips
