topics This book contains both selected and invited papers The 33 selected papers are organized in 11 sessions encompassing the major themes of the conference especially schema transformation evolution and integration temporal database design views and reuse in conceptual modeling advanced conceptual modeling business process modeling and workflows data warehouse design Besides the selected papers 3 invited papers present the views of three keynote speakers internationally known for their contribution to conceptual modeling and database research and for their active role in knowledge dissemination Peter Chen presents the results of his ongoing research on ER model XML and the Web Georges Gardarin presents the first results of an ESPRIT project federating various data sources with XML and XML QL Finally Matthias Jarke develops a way to capture and evaluate the experiences gained about process designs in so called process data warehouses

Computer Recognition Systems Marek Kurzynski, Edward Puchala, Michal Wozniak, Andrzej Zolnierok, 2007-12-13 th This book contains papers accepted for presentation at the 4 International Conference on Computer Recognition Systems CORES 05 May 22 25 2005 Rydzyna Castle Poland This conference is a continuation of a series of conferences on similar topics KOSYR organized each second year since 1999 by the Chair of Systems and Computer Networks Wroclaw University of Technology An increasing interest to those conferences paid not only by home but also by foreign participants inspired the organizers to transform them into conferences of international range Our expectations that the community of specialists in computer recognizing systems will find CORES 05 a proper form of maintaining the tradition of the former conferences have been confirmed by a large number of submitted papers Alas organizational constraints caused a necessity to narrow the acceptance criteria so that only 100 papers have been finally included into the conference program The area covered by accepted papers is still very large and it shows how vivacious is scientific activity in the domain of computer recognition methods and systems It contains various theoretical approaches to the recognition problem based on mathematical statistics fuzzy sets morphological methods wavelets syntactic methods genetic algorithms artificial neural networks ontological models etc Most attention is still paid to visual objects recognition however acoustic textual and other objects are also considered Among application areas medical problems are in majority recognition of faces speech signals and textual information processing methods being also investigated

The Oxford Handbook of Value Theory Iwao Hirose, Jonas Olson (College teacher), 2015 Value theory or axiology looks at what things are good or bad how good or bad they are and most fundamentally what it is for a thing to be good or bad Questions about value and about what is valuable are important to moral philosophers since most moral theories hold that we ought to promote the good even if this is not the only thing we ought to do This Handbook focuses on value theory as it pertains to ethics broadly construed and provides a comprehensive overview of contemporary debates pertaining not only to philosophy but also to other disciplines most notably political theory and economics The Handbook's twenty two newly commissioned chapters are divided into three parts Part I Foundations concerns fundamental and interrelated issues about the nature of value and distinctions between kinds of value Part II

Structure concerns formal properties of value that bear on the possibilities of measuring and comparing value Part III Extensions finally considers specific topics ranging from health to freedom where questions of value figure prominently

The Journal of the Society of Automotive Engineers ,1927 Understanding Advanced Statistical Methods

Peter Westfall, Kevin S. S. Henning, 2013-04-09 Providing a much needed bridge between elementary statistics courses and advanced research methods courses Understanding Advanced Statistical Methods helps students grasp the fundamental assumptions and machinery behind sophisticated statistical topics such as logistic regression maximum likelihood bootstrapping nonparametrics and Bayesian methods The book teaches students how to properly model think critically and design their own studies to avoid common errors It leads them to think differently not only about math and statistics but also about general research and the scientific method With a focus on statistical models as producers of data the book enables students to more easily understand the machinery of advanced statistics It also downplays the population interpretation of statistical models and presents Bayesian methods before frequentist ones Requiring no prior calculus experience the text employs a just in time approach that introduces mathematical topics including calculus where needed Formulas throughout the text are used to explain why calculus and probability are essential in statistical modeling The authors also intuitively explain the theory and logic behind real data analysis incorporating a range of application examples from the social economic biological medical physical and engineering sciences Enabling your students to answer the why behind statistical methods this text teaches them how to successfully draw conclusions when the premises are flawed It empowers them to use advanced statistical methods with confidence and develop their own statistical recipes Ancillary materials are available on the book's website

Casing a Promised Land, Expanded Edition H. L. Goodall, 1994-07-27 H L Goodall's ground breaking study of what people do with symbols and what symbols do to people explores the lives led by people in organizations His narratives take on the form of six detective mysteries in which the narrator figures into the plot of the intrigue and then works out its essential patterns In the first mystery Notes on a Cultural Evolution The Remaking of a Software Company Goodall looks at the transition of a Huntsville regional office of a Boston based computer software company where the lives and social dramas of the participants reflect the current state of high technology The second essay and perhaps the most insightful The Way the World Ends Inside Star Wars penetrates the various defenses of the Star Wars command office in Huntsville to discover its secrets and surprises Goodall shows how media technology fear of relationships and symbolic images of the future unite into the day to day operations of people who believe they are responsible for the outer limits of our nation's defense Lost in Space The Layers of Illusion Called Adult Space Camp illustrates how a supposedly innocent theme park invites participation in rituals and ceremonies designed to

influence a future generation of taxpayers In Articles of Faith Goodall enters a super mall in Huntsville noting how shopping centers provide consumers with far more than places to purchase goods and services How I Spent My Summer Vacation finds Goodall back in an academic environment at a conference of communication scholars where he demonstrates the difficult task of translating cultural understandings from one context to another The Consultant as Organizational Detective offers the sobering message that real life mysteries may surprise even the most accomplished sleuth A concluding chapter Notes on Method and a new autobiographical afterword round out Goodall s penetrating look at our symbol making culture
