**Quantum Error Correction** Giuliano Gadioli La Guardia, 2020-06-25 This text presents an algebraic approach to the construction of several important families of quantum codes derived from classical codes by applying the well known Calderbank Shor Steane CSS Hermitian and Steane enlargement constructions to certain classes of classical codes In addition the book presents families of asymmetric quantum codes with good parameters and provides a detailed description of the procedures adopted to construct families of asymmetric quantum convolutional codes Featuring accessible language and clear explanations the book is suitable for use in advanced undergraduate and graduate courses as well as for self guided study and reference It provides an expert introduction to algebraic techniques of code construction and because all of the constructions are performed algebraically it enables the reader to construct families of codes rather than only codes with specific parameters The text offers an abundance of worked examples exercises and open ended problems to motivate the reader to further investigate this rich area of inquiry End of chapter summaries and a glossary of key terms allow for easy review and reference

**Automated Methods in Cryptographic Fault Analysis** Jakub Breier, Xiaolu Hou, Shivam Bhasin, 2019-03-19 This book presents a collection of automated methods that are useful for different aspects of fault analysis in cryptography The first part focuses on automated analysis of symmetric cipher design specifications software implementations and hardware circuits The second part provides automated deployment of countermeasures The third part provides automated evaluation of countermeasures against fault attacks Finally the fourth part focuses on automating fault attack experiments The presented methods enable software developers circuit designers and cryptographers to test and harden their products

*Transforming Learning with Meaningful Technologies* Maren Scheffel, Julien Broisin, Viktoria Pammer-Schindler, Andri Ioannou, Jan Schneider, 2019-09-09 This book constitutes the proceedings of the 14th European Conference on Technology Enhanced Learning EC TEL 2019 held in Delft The Netherlands in September 2019 The 41 research papers and 50 demo and poster

papers presented in this volume were carefully reviewed and selected from 149 submissions. The contributions reflect the debate around the role of and challenges for cutting edge 21st century meaningful technologies and advances such as artificial intelligence and robots augmented reality and ubiquitous computing technologies and at the same time connecting them to different pedagogical approaches types of learning settings and application domains that can benefit from such technologies.

**Quantum Information Processing** Thomas Beth, Gerd Leuchs, 2006-03-06 Quantum processing and communication is emerging as a challenging technique at the beginning of the new millennium. This is an up to date insight into the current research of quantum superposition entanglement and the quantum measurement process the key ingredients of quantum information processing. The authors further address quantum protocols and algorithms. Complementary to similar programmes in other countries and at the European level the German Research Foundation DFG realized a focused research program on quantum information. The contributions written by leading experts bring together the latest results in quantum information as well as addressing all the relevant questions.

Cryptography and Coding Bahram Honary, 2003-06-30 The mathematical theory and practice of cryptography and coding underpins the provision of effective security and reliability for data communication processing and storage. Theoretical and implementational advances in the fields of cryptography and coding are therefore a key factor in facilitating the growth of data communications and data networks of various types. Thus this Eight International Conference in an established and successful IMA series on the theme of Cryptography and Coding was both timely and relevant. The theme of this conference was the future of coding and cryptography which was touched upon in presentations by a number of invited speakers and researchers. The papers that appear in this book include recent research and development in error control coding and cryptography. These start with mathematical bounds statistical decoding schemes for error correcting codes and undetected error probabilities and continue with the theoretical aspects of error correction coding such as graph and trellis decoding multifunctional and multiple access communication systems low density parity check codes and iterative decoding. These are followed by some papers on key recovery attack authentication stream cipher design and analysis of ECIES algorithms and lattice attacks on IP based protocols.

Near-Capacity Variable-Length Coding Lajos Hanzo, Robert G. Maunder, Jin Wang, Lie-Liang Yang, 2011-06-15 Recent developments such as the invention of powerful turbo decoding and irregular designs together with the increase in the number of potential applications to multimedia signal compression have increased the importance of variable length coding VLC. Providing insights into the very latest research the authors examine the design of diverse near capacity VLC codes in the context of wireless telecommunications. The book commences with an introduction to Information Theory followed by a discussion of Regular as well as Irregular Variable Length Coding and their applications in joint source and channel coding. Near capacity designs are created using Extrinsic Information Transfer EXIT chart analysis. The latest techniques are discussed outlining radical concepts such as Genetic Algorithm GA aided construction of diverse VLC codes. The book concludes with two

chapters on VLC based space time transceivers as well as on frequency hopping assisted schemes followed by suggestions for future work on the topic Surveys the historic evolution and development of VLCs Discusses the very latest research into VLC codes Introduces the novel concept of Irregular VLCs and their application in joint source and channel coding     **Quantum Computation with Topological Codes** Keisuke Fujii,2015-12-15 This book presents a self consistent review of quantum computation with topological quantum codes The book covers everything required to understand topological fault tolerant quantum computation ranging from the definition of the surface code to topological quantum error correction and topological fault tolerant operations The underlying basic concepts and powerful tools such as universal quantum computation quantum algorithms stabilizer formalism and measurement based quantum computation are also introduced in a self consistent way The interdisciplinary fields between quantum information and other fields of physics such as condensed matter physics and statistical physics are also explored in terms of the topological quantum codes This book thus provides the first comprehensive description of the whole picture of topological quantum codes and quantum computation with them
