Unit Overview

Trees and Forests 6

Look to the Tree!

Unit Summary

6-28 Describe characteristics of trees and the interactions of trees with other living things in the local environment.

Science and Socials are undergoing a trial change this year. Instead of teaching overlapping units we will use our afternoon blocks to teach science one month and a socials topic the next month. Hopefully this will lead to a more holistic understanding of each unit.

Children have a natural curiosity about their surroundings—a desire to explore and investigate, see inside things, find out how things work and find answers to their questions. Learning about science provides a framework for students to understand and interpret the world around them.

Students learn about trees as individual plants and as part of a forest ecosystem. By examining local species, they learn to recognize the characteristics of different trees and develop skill in describing and interpreting the structural features of trees. As part of their studies, students learn about a broad range of living things found in, under and around trees and study the complex interaction between trees and the larger environment. In examining human use of forests, they become aware of a broad range of environmental issues and develop an awareness of the need for responsible use.

This is a one month theme, directed at a sixth grade audience in the beginning semester of the year. This unit will lead students on a journey of inquiry and problem solving in which they will discover materials new and common in their environment. They will be guided in handling these materials, analyzing research and developing opinions. Students will gather knowledge about the fundamental elements of forestry and tree based environmentalism and the history science. This unit will also focus on developing a stewardship perspective of the scientific world and a conservationist understanding of our place in it. This unit is designed to be an adventure in science, forests and personal understanding.

Science 6 Trees And Forests:

The Ecology of Trees in the Tropical Rain Forest I. M. Turner, 2001-07-05 Our knowledge of the ecology of tropical rain forest trees is limited with detailed information available for perhaps only a few hundred of the many thousand of species that occur Yet a good understanding of the trees is essential to unravelling the workings of the forest itself This book aims to summarise contemporary understanding of the ecology of tropical rain forest trees The emphasis is on comparative ecology an approach that can help to identify possible adaptive trends and evolutionary constraints and which may also lead to a workable ecological classification for tree species conceptually simplifying the rain forest community and making it more amenable to analysis *Forested Wetlands of the Southern United States*, 2001 Riparian Landscapes George Patrick Malanson, 1993-05-27 Riparian Landscapes examines the ecological systems of streamside and floodplain areas from the perspective of landscape ecology The specific spatial pattern of riparian vegetation is seen as a result of and a control on the ecological geomorphological and hydrological processes that operate along rivers Riparian structures are controlled by the spatial dynamics of channels flooding and soil moisture These dynamics are part of integrated cascades of water sediment nutrients and carbon to which animal and plant species respond in ways that illuminate community structure and competition The role of the riparian zone in controlling species distribution and abundance is discussed Intelligent management of these valuable ecological resources is highlighted The potential for linking hydrological geomorphological and ecological simulation models is also explored This book will be of interest to graduate and professional research workers in environmental science ecology and physical geography **Trees and Forests**, 1996 **General Technical Report SRS**, 1995 **Seeing the Forest for the Trees** Gordon Bonan, 2023-02-09 Planting trees to improve climate is an age old idea once refuted in scientific dispute more than a century ago and reborn today with climate change worries Spanning the 1500s to the present this book examines the history and science of forest climate influences and forest management to mitigate climate change **Social Indicators**, 1990 Silvics of North America, 1990 **Agriculture Handbook**, 2008-07 **Silvics of North America: Hardwoods** Russell M.
