The term shaping comes from experimental psychology where it describes the incremental training of animals. The authors propose a new engineering discipline, behavior engineering, to provide the methodologies and tools for creating autonomous robots. Their techniques are based on classifier systems, a reinforcement learning architecture originated by John Holland, to which they have added several new ideas such as a multi-spec classifier system, energy, and dynamic population size. In the book, they present Behavior Analysis and Training (BAT) as an example of a behavior engineering methodology.
