going through a rapid evolution and there are many emerging areas of information networking and their applications. Heterogeneous networking supported by recent technological advances in low power wireless communications along with silicon integration of various functionalities such as sensing, communications intelligence and actuations are emerging as a critically important disruptive computer class based on a new platform networking structure and interface that enable novel low cost and high volume applications. Several of such applications have been difficult to realize because of many interconnections problems. To fulfill their large range of applications, different kinds of networks need to collaborate and wired and next generation wireless systems should be integrated in order to develop high performance computing solutions to problems arising from the complexities of these networks. This book covers the theory, design and applications of computer networks, distributed computing and information systems.

Advances on Broad-Band Wireless Computing, Communication and Applications Leonard Barolli, Fatos Xhafa, Jordi Conesa, 2017-10-30. This book gathers the Proceedings of the 12th International Conference on Broad Band Wireless Computing, Communication and Applications held on November 8-10, 2017 in Barcelona, Spain. Information networking is currently undergoing a rapid evolution. Different kinds of networks with different characteristics are emerging and being integrated in heterogeneous networks. As a result, there are many interconnected problems that can occur at different levels of the hardware and software design of communicating entities and communication networks. These networks are expected to manage increasing usage demand, provide support for a significant number of services, guarantee Quality of Service (QoS) and optimize the use of network resources. The success of all IP networking and wireless technology has changed the lifestyles of people around the world and advances in electronic integration and wireless communications will pave the way to providing access to wireless networks on the fly, as electronic devices can increasingly exchange information with each other virtually anytime and anywhere. The aim of this book is to provide the latest findings, methods and development techniques from both theoretical and practical perspectives regarding the emerging areas of broad band and wireless computing.

Complex, Intelligent, and Software Intensive Systems Leonard Barolli, Farookh Khadeer Hussain, Makoto Ikeda, 2019-06-20. This book presents scientific interactions between the three interwoven and challenging areas of research and development of future ICT-enabled applications: software complex systems and intelligent systems. Software intensive systems heavily interact with other systems, sensors, actuators and devices as well as other software systems and users. More and more domains involve software intensive systems, e.g., automotive, telecommunication systems, embedded systems in general, industrial automation systems and business applications. Moreover, web services offer a new platform for enabling software intensive systems. Complex systems research focuses on understanding overall systems rather than their components. Such systems are characterized by the changing environments in which they act and they evolve and adapt through internal and external dynamic interactions. The development of intelligent systems and agents features the use of ontologies and their logical foundations, provide a fruitful impulse for both

software intensive systems and complex systems Research in the field of intelligent systems robotics neuroscience artificial intelligence and cognitive sciences is a vital factor in the future development and innovation of software intensive and complex systems
