

Neuron Anatomy Activity

The parts of the neuron have been labeled. Your challenge is to write the correct name for each part and explain what it does. If you need some help, ask your tutor or consult the lecture notes/Google.

1. Axon terminals

Release the neurotransmitters/
information of the presynaptic cell

2. Myelin Sheath – nodes

Allows electrical impulses to be
transmitted quickly and efficiently
along the nerve cells

3. Axon

Carries impulses/ information away
from the nerve/ cell body

4. Soma (Cell body)

Contain genetic information,
maintains the structure of the
neuron and provides energy to drive
activities

5. Nucleus

Needed for the production of
proteins within the cell

6. Dendrites

Receiving part of the neuron.
Receives synaptic input from the
axons – receives information from
other cells.

Neural Networks E. R. Caianiello, 2012-12-06 Sciences may be nowadays grouped into three classes having as their subjects of study respectively Matter Life and Intelligence That Intelligence may be studied in a quantitative manner is a discovery of our age not less significant in many ways than the 17th century realization that celestial phenomena are of one and the same nature as terrestrial and all other physical accidents As the latter was accomplished through and accompanied by a major revolution in philosophy and method so is now the scientific investigation of intelligent phenomena although barely begun already causing an unprecedented revolution in all our previous conceptions as mind and machine society and organization What electronic computers have already accomplished in disclosing perspectives to sciences and imposing new approaches to management is but a negligible change if compared to those yet in store which will closely follow the understanding of the many as yet unknown functional principles which make nervous systems act and react the way they do The study of Neural Networks is the key point in the systematic quantitative investigation of such phenomena With patience and humility neuroanatomists and physiologists try to connect structure with function in systems of neurons which are simple enough to be studied with the extant techniques either because of the paucity of their elements or because of the high degree of symmetry these possess e g
