The last few years have witnessed a substantial maturing of long life Stirling cycle cryocoolers built upon the heritage of the flexure bearing cryocoolers from Oxford University and have seen the emergence of mature pulse tube cryocoolers competing head to head with the Stirling cryocoolers Hydrogen sorption cryocoolers Gifford McMahon cryocoolers with rare earth regenerators and helium Joule Thomson cryocoolers have also made tremendous progress in opening up applications in the 4 K to 10 K temperature range Tactical Stirling cryocoolers now commonplace in the defense industry are finding application in a number of cost constrained commercial applications and space missions and are achieving ever longer lives as they move to linear drive clearance seal compressors Building on this expanding availability of commercially viable cryocoolers numerous new applications are being enabled many of these involve infrared imaging systems and high temperature superconductors in the medical and communications fields The vibration sensitivity of many of the infrared and medical imaging applications has led to the recognition that cryocooler generated vibration and EMI is a critical performance parameter for these applications In response advanced closed loop active vibration control systems have been developed and are being delivered to their first users Application experiments designed to explore troubleshoot and resolve product integration issues are occurring on an ever widening front particularly in the fields of infrared imaging and spectroscopy gamma ray spectroscopy and high temperature superconductor applications An important lesson is that integrating cryogenic systems requires care and thoughtfulness in a broad range of engineering and scientific disciplines

*Concise Handbook of Fluorocarbon Gases* Sina Ebnesajjad, 2021-04-13. This book describes fluorocarbon gases, preparation process, properties, applications, and their evolution over time. The impact of fluorocarbons on the ozone layer and global development to mitigate those effects have been specially emphasized. The first major industrial fluorinated compound was developed in the 1920s to replace ammonia and sulfur dioxide refrigerants at the General Motors Frigidaire Division by Thomas Midgley Jr and Albert Leon Henne. They developed a family of fluorocarbons trademarked Freon for auto air conditioning units, revolutionizing the auto industry. Other applications were developed over time, including fire extinguishers, propellants, blowing agents, cleaners, anesthesia, artificial blood, and others impacting every facet of life. In spite of being in broad global use for nearly a century, fluorocarbon gases have gone through great evolution during the last few decades. In the 1980s, it was discovered that chlorofluorocarbon (CFC) gases are harmful to the ozone layer mainly because of their chlorine content. Chlorine was released in the upper atmosphere when chlorofluorocarbon molecules were broken down by the high energy cosmic radiation. CFCs were progressively banned following the Montreal Protocol of 1987. CFCs were replaced by fluorinated gases containing either less chlorine, hydrofluoro chlorocarbons, or HCFCs, which are much less damaging, about 90% less to the ozone layer, or with fluorinated gases containing no chlorine, i.e., hydrofluorocarbons or HFCs. HFCs have no impact on the ozone layer but impact global warming detrimentally. HFCs are usable without need for changes to the existing refrigeration or air conditioning installations. More recently, hydrofluoroolefins (HFOs), which have little or no negative impact on global warming, have been developed to replace or reduce the use of HFCs. HFOs are used as single compounds or in blends. Research and development continues to develop and replace the HCFCs and HFCs completely with environmentally friendly products.

*Concise Handbook of Fluorocarbon Gases* presents a reference and text for the commercial fluorocarbon gases, which have great many applications in a wide range of industries such as refrigeration and air conditioning, as well as consumer products.
