# Layers of the Earth

Our planet Earth is constructed of several layers.

Directions: Match the layers to their definitions.

lithosphere

The innermost layer, extremely hot and solid, composed of mostly iron and nickel.

outer core

The earth's outermost and thinnest layer, hard and rigid, and only a few miles thick under the oceans and averaging 20 miles thick under the continents.

crust

Hot, malfeable semiliquid in the upper mantle on which the plates of the lithosphere float.

mantle

Made up of the crust and a tiny bit of the upper mantle, this layer is divided up into constantly moving plates of solid rock that hold the continents and the oceans.

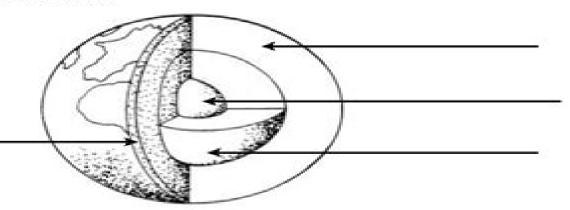

asthenosphere

A dense layer subdivided into upper and lower regions made of hot, semisolid rock located directly below the crust and about 1.800 miles thick.

inner core

The only liquid layer of the earth, this layer is made up mostly of iron and nickel. It is located about 2000 miles below the surface.

Label the layers of the earth below.

Children's Ways with Science and Literacy Maria Varelas, Christine C. Pappas, 2013-05-07 Science is often a forgotten subject in early elementary grades as various mandates require teachers to focus on teaching young students to achieve specific reading and mathematical competencies This book offers specific examples and empirical evidence of how integrated science literacy curriculum and teaching in urban primary grade classrooms give students opportunities to learn science and to develop positive images of themselves as scientists The Integrated Science Literacy Enactments ISLE approach builds on multimodal multidimensional and dialogically oriented teaching and learning principles Readers see how as children engage with texts material objects dialogue ideas and symbols in their classroom community they are helped to bridge their own understandings and ways with words and images with those of science In doing so they become learners of both science and literacy The book features both researcher and teacher perspectives It explores science learning and its intersection with literacy development in schools that educate predominately children of color many of whom struggle with poverty and have been traditionally underestimated underserved and underrated in science classrooms In all these ways this volume is a significant contribution to a critically under researched area of science education The Essentials of Science, Grades 7-12 Rick Allen, 2007 Learn about best practices in secondary science education from curriculum planning and ongoing assessment to student motivation and professional development for teachers **Educational Science Research, Theory** Abdülkadir Kabadayı, 2021-12-15 Educational Science Research Theory Resources in Education ,1993 **Graded Course** of the Milwaukee Public Schools Milwaukee (Wis.). Board of School Directors, 1889 The Science I Know Suzanna Roman-Oliver, 2024-07-08 The Science I Know Culturally Relevant Science Lessons from Secondary Classrooms is a collection of culturally relevant lesson plans written by secondary science teachers Each lesson discusses how the tenets of academic success cultural competence and critical consciousness that are part of the theory of Culturally Relevant Pedagogy CRP are addressed Ladson Billings 1995 Additionally each lesson plan is structured following the 5E learning cycle Bybee 2006 and aligned to the Next Generation Science Standards NAS 2012 The goal of this book is to help science teachers understand how to go about designing lessons that are culturally relevant The hope is that the lessons that are detailed in each chapter will inspire teachers to draw the cultural knowledge from their students and capitalize on it when designing science lessons After an introductory chapter that discusses how science education has shifted in recent decades to address the needs of diverse students the main body of the text is divided into three sections. The first part introduces Culturally Relevant Pedagogy CRP as a framework this is important for those readers unfamiliar with Gloria Ladson Billings work It addresses and discusses the three tenets of CRP Academic Success Cultural Competence and Critical Consciousness and it includes an explanation of how each area can be observed and addressed in science education specifically. The second part features lesson plans from secondary science classrooms written by teachers from different subject areas i e life science physical

science earth science etc The lesson plans follow the 5E Instructional Model Bybee et al 2006 This model promotes inquiry by guiding teachers in the design of lesson plans that are based upon cognitive psychology constructivist learning theory and best practices in science teaching Duran Education and Culture Learner Differences Secondary Science Pedagogy Culturally Relevant Science and Multicultural Education **Designing and Teaching the Secondary Science Methods Course** Aaron J.
