

Inovonics Wireless Solutions

Inovonics' line of wireless intrusion detection devices, powered by EchoStream® wireless technology, are designed with today's applications in mind. With installations ranging from single alarm transmitters to thousands of security devices across a campus, the EchoStream family of pendant transmitters, universal transmitters, motion detectors, environmental sensors, and add-on receivers can connect to virtually any security system.

The high power repeater network intelligently amplifies transmission from any EchoStream series transmitter to penetrate all types of building construction thus eliminating the need for extraneous labor associated with wired installs. EchoStream wireless provides the ultimate flexibility to cover large commercial buildings as well as complete campuses.

Features

- Wireless integration and alarm management
- RS232 communication with Pacom field controllers
- RF signal strength diagnostics
- Remote arming and disarming with transmitters
- Flexible supervision prevents false alarms if pendant is taken off site
- Support for up to 256 transmitters per field controller
- Can be seamlessly integrated with existing Pacom field controllers
- Transmitters and repeaters can be programmed via Pacom keypad or GMS software
- View transmitter and repeater status on keypad
- Auto-detection of EN4200 receivers
- Intelligent redundancy ensures that critical alarms from a transmitter can be received by multiple EN4200 receivers at a site but only reported once to the GMS

TCP/IP is dramatically changing the face of information technology and driving requirements for ever more secure, scalable and highly available mainframe TCP/IP implementations. The IBM z/OS Communications Server TCP/IP Implementation series provides understandable step-by-step guidance about how to enable the most commonly used and important functions of z/OS Communications Server TCP/IP. This IBM Redbooks publication is for people who install and support z/OS Communications Server. It explains how to set up security for your z/OS networking environment. With the advent of TCP/IP and the Internet, network security requirements have become more stringent and complex. Because many transactions are from unknown users and untrusted networks such as the Internet, careful attention must be given to host and user authentication, data privacy, data origin authentication and data integrity. Also, because security technologies are complex and can be confusing, we include helpful tutorial information in the appendixes of this book. For more information about z/OS Communications Server base functions, standard applications and high availability, see the other following volumes in the series: IBM z/OS V2R2 Communications Server TCP/IP Implementation Volume 1: Base Functions, Connectivity and Routing (SG24-8360); IBM z/OS V2R2 Communications Server TCP/IP Implementation Volume 2: Standard Applications (SG24-8361); IBM z/OS V2R2 Communications Server TCP/IP Implementation Volume 3: High Availability, Scalability and Performance (SG24-8362). This book does not duplicate the information in these publications. Instead, it complements those publications with practical implementation scenarios that might be useful in your environment. Credle Jr., Uma Maheswari Kumaraguru, Gilson Cesar de Oliveira, Micky Reichenberg, Georg Senfleben, Rutsakon Techo, Maulide Xavier, IBM Redbooks, 2016-02-10. For more than 40 years, IBM mainframes have supported an extraordinary portion of the world's computing work, providing centralized corporate databases and mission-critical enterprise-wide applications. IBM System z, the latest generation of the IBM distinguished family of mainframe systems, has come a long way from its IBM System 360 heritage. Likewise, its z/OS operating system is far superior to its predecessors in providing, among many other capabilities, world-class and state-of-the-art support for the TCP/IP Internet protocol suite. TCP/IP is a large and evolving collection of communication protocols managed by the Internet Engineering Task Force (IETF), an open volunteer organization. The National Security Agency's INFOSEC Assessment Methodology IAM provides guidelines for performing an analysis of how information is handled within an organization, looking at the systems that store, transfer and process information. It also analyzes the impact to an organization if there is a loss of integrity, confidentiality or availability. Security Assessment shows how to do a complete security assessment based on the NSA's guidelines. Security Assessment also focuses on providing a detailed organizational information technology security assessment using case studies. The Methodology used for the assessment is based on the National Security Agency's NSA INFOSEC Assessment Methodology IAM. Examples will be given dealing with issues related to military organizations, medical issues, critical infrastructure, power generation etc. Security Assessment is intended to provide an educational and entertaining analysis of an organization, showing the steps of the assessment and the challenges faced during an assessment. It will also provide examples, sample templates and sample deliverables that readers can take with them to help them be better prepared and make the methodology easier to implement.
