Chalkis Aitolias II Sanne Houbby-Nielsen,2020-07-24 Homeric Chalkis is situated on the coast of Aetolia at the very gateway of the Gulf of Patras The foundation occurred during an important period in early Greek history when trade and movement of peoples along the Gulf intensified with a resulting strong pull to the coast Well preserved stratigraphies date the foundation to the early seventh century BC and testify to a flourishing settlement in the sixth century lasting till the early fifth century BC when the site was temporarily given up Walls and roads follow a rectilinear layout A broad spectre of pottery shapes and wares attest

to innovative local and regional workshops already from the onset of the settlement. Alongside the pottery tools for complex textile manufacture were found in all houses among which were many small pyramidal loom weights and spools. These findings indicated a high degree of experimental weaving techniques and demonstrated how the courtyard house as a new house model was particularly well suited to accommodate this manufacture. The results therefore offer important new evidence on relations between gender behaviour and Greek houses. The catalogue is richly illustrated with profile drawings, plans, black and white and colour photos and accompanied by discussions of the material. **NIVAC**

This section identifies comparable situations to those faced in the Bible and explores relevant application of the biblical messages. The author alerts the readers of problems they may encounter when seeking to apply the passage and helps them think through the issues involved. This unique award-winning commentary is the ideal resource for today's preachers, teachers and serious students of the Bible, giving them the tools, ideas and insights they need to communicate God's Word with the same powerful impact it had when it was first written. *Annual Report* Saint Louis (Mo.). Board of Education, 1912. **Studies in Ancient Technology** R. J. Forbes, 1987-01-01. Photomechanical reprint of the 2nd rev. ed. **Textiles and Gender in Antiquity** Mary Harlow, Cecile Michel, Louise Quillien, 2020-11-12. This volume looks at how the issues of textiles and gender intertwine across three millennia in antiquity and examines continuities and differences across time and space with surprising resonances for the modern world. The interplay of gender identity, textile production and use is notable on many levels, from the question of who was involved in the transformation of raw materials into fabric at one end to the wearing of garments and the construction of identity at the other. Textile production has often been considered to follow a linear trajectory from a domestic female activity to a more commercial or industrial male-centred mode of production. In reality, many modes of production co-existed and the making of textiles is not so easily grafted onto the labour of one sex or the other. Similarly, textiles once transformed into garments are often of unisex shape but worn to express the gender of the wearer. As shown by the detailed textual source material and the rich illustrations in this volume, dress and gender are intimately linked in the visual and written records of antiquity. The contributors show how it is common practice in both art and literature not only to use particular garments to characterize one sex or the other but also to undermine characterizations by suggesting that they display features usually associated with the opposite gender. **India Rubber World**, 1921. **India Rubber World and Electrical Trades**
