

Name: _____ Date: _____

Student Exploration: Populations and Samples

Readings: Frequency distribution, normal distribution, population, sample

Prior Knowledge Questions (What do you already know about this topic?)

a. **Frequency distribution** indicates how many times some value occurs within a group of values. Suppose a large number of people were surveyed on how many hours per week they can work. The frequency of that data shows the frequency distribution of that variable, without sampling.

b. How would you approximate shape of the distribution?

c. As the curve grows to the right, which value gets closer to frequency distribution might also find the same shape would describe the number before sampling?

Classroom Setup

In many cases, a population frequency distribution is not **symmetrical**. However, when frequency is similar **sample**, or values of the population, then the sample will approach a normal distribution. This is the **Central Limit Theorem**.

a. The normal distribution is the **Central Limit Theorem** which frequency distribution described curve. It is when a large number of samples are taken from a population. There is a normal distribution. Find mean _____ Size mean _____

b. About the **Central Limit Theorem** of the way to the left side of the graph is that being sampled from a distribution. Find **Mean** _____ when the sample size is about 10.

i. What is the mean of each sample? (Mean) _____ Size mean _____

ii. How many of the sample means is the population? _____
