

Name _____

Describe the Subject

Based on the following questions from a previous Science Olympiad, I have reviewed the top-scoring responses that follow and assign a score to each. After assigning a score justify the score you gave to each response. Consider explaining what the response included and what it was missing. If the response covered all parts of the question and/or if they response presents accurate or inaccurate content.

Use the following information and graph to answer question 25.

A reading of research in investigating immune response in humans exposed to a specific pathogen. The graph below shows the concentration of a pathogen antibody in the bloodstream produced during the process of acquired immunity. One curve shows the primary immune response (after the first exposure to the pathogen), and the other curve shows the secondary immune response (after the second exposure to the pathogen).

A vaccine often serves as the first exposure to a pathogen and triggers the body's primary immune response. Some vaccines contain weakened or inactive pathogens. Other vaccines contain highly similar but nonpathogenic toxins.

Concentration of Antibody in Primary and Secondary Acquired Immune Response

25. Describe two benefits of receiving a vaccine, such as the polio vaccine, in protecting the body against disease, and include data from the graph to support each benefit. Describe in the space provided in your answer document all points.
