Resources in Education ,1998-04 *History of Computing: Learning from the Past* Arthur Tatnall,2010-08-13

History of Computing Learning from the Past Why is the history of computing important Given that the computer as we now know it came into existence less than 70 years ago it might seem a little odd to some people that we are concerned with its history Isn t history about old things Computing of course goes back much further than 70 years with many earlier vices rightly being known as computers and their history is of course important It is only the history of electronic digital computers that is relatively recent History is often justified by use of a quote from George Santayana who famously said that Those who cannot remember the past are condemned to repeat it It is arguable whether there are particular mistakes in the history of computing that we should avoid in the future but there is some circularity in

this question as the only way we will know the answer to this is to study our history This book contains papers on a wide range of topics relating to the history of computing written both by historians and also by those who were involved in creating this history The papers are the result of an international conference on the History of Computing that was held as a part of the IFIP World Computer Congress in Brisbane in September 2010 Children's Additional Language Learning in Instructional Settings Yuko Goto Butler, 2025-05-08 This book provides the first comprehensive overview of young children's language learning in pre primary and primary education It collates research to date on language development and pedagogy among children learning a language in addition to their home language s in instructional settings providing readers with a thorough understanding of the topic and directions for further study The book promotes a learner centered approach to research and teaching and encourages critical reflection on how best to conduct research among children It recognizes the substantial diversity of young language learning experiences and pays attention to individual differences and variability in children's language development embracing an ecological perspective sensitive to contextual factors Closing the gap between research and practice each chapter opens with pedagogical or policy related questions explores relevant theories and research findings from instructed second language acquisition and offers discussion questions and recommended reading for further reflection and study This will be invaluable reading for all those who are undertaking research and working with young language learners **Perception and Production of Fluent Speech** Ronald A. Cole, 2016-07-28 Originally published in 1980 this title looks at the mental processes involved in producing and understanding spoken language Although there had been several edited volumes on speech in the previous ten years this volume was unique in that it deals exclusively with perception and production of fluent speech The chapters in this volume contributed to by distinguished scientists from psychology linguistics and computer science deal with such questions as How are ideas encoded into sound How does a speaker plan an utterance How are words recognized What is the role of knowledge in speech perception In short how do people communicate with each other using speech **Symposium on Democracy and the Academy**, 1998
