

Module 1 learning unit 1

- A **Computer** is a programmable machine.
- The two principal characteristics of a computer are:
 - It responds to a specific set of instructions in a well-defined manner.
 - It can execute a prerecorded list of instructions (a program).
- Modern computers are electronic and digital.
- The actual machinery wires, transistors, and circuits is called hardware. the instructions and data are called software.
-

- All general-purpose computers require the following hardware components:
 - **Memory:** Enables a computer to store, at least temporarily, data and programs.
 - **Mass storage device:** Allows a computer to permanently retain large amounts of data. Common mass storage devices include disk drives and tape drives.
 - **Input device:** Usually a keyboard and mouse are the input device through which data and instructions enter a computer.
 - **Output device:** A display screen, printer, or other device that lets you see what the computer has accomplished.
 - **Central processing unit (CPU):** The heart of the computer, this is the component that actually executes instructions.
- In addition to these components, many others make it possible for the basic components to work together efficiently.
- For example, every computer requires a bus that transmits data from one part of the computer to another.
